UP & DOWN WALL STREET

The problem is that investors will start looking for stocks that are most likely to be on the receiving end of government largess.

Big Brother Is Coming For Your Portfolio

BY BEN LEVISOHN

Capitalism has become a losing position in recent elections—and that's bad news for investors.

As a Brooklyn resident, I experienced this firsthand with the election of Zohran Mamdani, a member of the Democratic Socialists of America, as mayor of the city that was once the beating heart of American business. Mamdani won on a plan to offer free bus rides, freeze rents, increase taxes on the wealthy and corporations, and create city-owned grocery stores. Each of these proposals attempts to address real problems but are either the result of magical thinking or will do more harm than good.

Most of what Mamdani wants to do is outside the powers of the mayor of New York. Jefferies analyst Aniket Shah notes that Mamdani has the ability to ramp up enforcement of the housing code through city agencies and can electrify New York's government vehicles by his authority to manage city operations. He won't, however, be able to freeze rents without the approval of an independent board, and has no say over buses, which are managed by the Metropolitan Transportation Authority. Taxes and the minimum wage are set by the state. Even opening city-run grocery stores would take City Council approval, which seems unlikely.

Mamdani's election has had a market impact, even if it's limited to a small swath of companies. Shares of **SL Green Realty** and **Vornado Realty Trust**, real estate investment trusts focused on New York office space, have dropped 21% and 10%, respectively, since Mamdani won the Democratic primary over concerns that companies could decide to leave the city as a result of the new mayor's policies, as the S&P 500 rose 12%. Banks with exposure to rent-controlled apartments have been pressured as well. **Flagstar Financial** has fallen 4.3% over the same period, and **Dime Community Bancshares** has declined 2.7%, even as the **State Street SPDR S&P Regional Banking** exchange-traded fund has gained 4%.

Though the market impact of Mamdani's win is limited, the signal it sends isn't. Americans are increasingly comfortable voting for heavy-handed government, whether the socialist rhetoric coming from the left or the mercantilism emanating from President Donald Trump on the right. It's an irony not lost on Rosenberg Research founder David Rosenberg. "A free-enterprise country elects a president who embraces protectionism, economic nationalism, and state intervention," he writes. "And then New York City, the world's financial hub and bastion of Gordon Gekko capitalism, elects a self-avowed socialist for mayor."

I'm no free-market libertarian. I'm a firm believer that government should set clear rules that are enforced equally—and may the best companies win. But having government pick winners and losers ultimately means that companies will try to impress the politicians.

So it's with some chagrin that I watch Trump get involved at such a micro level with various American companies. The U.S. converted government grants into an equity stake in **Intel**; a "golden share" in U.S. Steel was the price for allowing its merger with Japan's **Nippon Steel** to go through; and Washington agreed to take a 15% cut of all chip revenue from China by **Nvidia** and **Advanced Micro Devices** to allow those sales to proceed.

Some deals make strategic sense. The U.S. does need to move chip manufacturing back home, though it remains to be seen if an investment in Intel is the way to do it. Better yet, the government's deal with rare-earth miner **MP Materials** seems like a quick and easy way to boost production of these essential products in a market that China has dominated by its willingness not to make a profit on these goods.

The problem is that investors will start looking not for good companies with solid fundamentals that will allocate capital efficiently, but for the stocks that are most likely to be on the receiving end of government largess. After the MP deal, shares of companies with a connection to rare earths, including **USA Rare Earth** and **Ramaco Resources**, popped even though they, unlike MP, are far from being able to mine the materials, process them, and then turn them into magnets.

It might not be a big deal when the companies have market values under $2 billion. It becomes a bigger one when everyone goes looking for a handout. A kerfuffle broke out after OpenAI's Sarah Friar suggested at The Wall Street Journal's Tech Live conference that the U.S. government should provide loan guarantees to help build out AI infrastructure.

Though the company walked back the statement, Wall Street wasn't thrilled by the idea that the government would provide the artificial-intelligence giant help in meeting its financial commitments or the possibility that it could actually get the assistance. "The U.S. administration has been more willing to take ownership stakes in other companies, and if the equity sweetener is generous enough, they may take the bait on this one as well," writes D.A. Davidson analyst Gil Luria.

Despite the S&P 500's 1.6% decline this past week, investors have, for the most part, ignored the risks of a more heavy-handed government. They shouldn't, if only because we've seen what happens when countries—with governments on the right and the left—use their companies as tools of policy.

Petrobras, for instance, has been a tool of Brazil's leaders on both ends of the spectrum, and has suffered because of it. Its stock has returned 6.2% annualized over the past 20 years, three points less than the 9.2% return offered by **Chevron**. In China, where companies operate at the whims of the Communist Party, **Alibaba** Group has returned 8.7% annualized over the past two decades, to **Amazon.com**'s 27%, while the **iShares MSCI China** ETF has returned just 4% annualized, less than a third of the S&P 500's 13% over the same period. And the less said about Europe and the impact of its stifling regulation, the better.

There's a reason the U.S. has outperformed everyone else over the long term. We mess with it at our own risk. B

Adam Gray / Bloomberg

STREETWISE

Much of the surplus investment is coming from Big Tech, which is spending it with Big Tech, whose earnings are up 29% for the quarter.

Big Tech Dominates On Earnings. Advice to The Rest: Don't Miss.

BY JACK HOUGH

Four times a year, America's publicly traded companies line up for a dunk contest on lowered rims called earnings season. The latest has gone even better than usual—despite this past week's skittish market.

Wall Street analysts had reduced their third-quarter earnings growth forecast for S&P 500 companies from 13% at the beginning of the year to 8% by the end of September. Estimate-trimming is standard procedure for setting up positive "surprises" come reporting time, but analysts must have taken too much off. Earnings beats have hit a four-year high in prevalence and size. The quarter is tracking toward 13% earnings growth.

Tariffs haven't hurt as much as expected. Judging by inventories, companies stocked up during a tariff pause that ran out in August, according to BofA Securities. Those inventories are now probably depleted, so fourth-quarter profit margins could be more telling. A weak dollar can help; each 10% drop can boost earnings by 3%.

These are minor details. With investors piled into index funds, indexes loaded with Big Tech, and valuations riding high, two questions matter more than the rest: Are artificial-intelligence hyperscalers still spending like Congress? And do investors still like that? The answers are "yes" and "mostly."

Microsoft, **Amazon.com**, **Alphabet**, and **Meta Platforms** alone could combine for capital expenditures of $356 billion this year, up 56%, reckons BofA. That compares with $904 billion, up 5%, for the rest of the S&P 500. Much of this surplus investment will be spent within Big Tech, whose earnings grew some 29% in the third quarter, according to Barclays Research. That compares with 5% earnings growth for the rest of the S&P 500.

Lavish capex guidance was well received, with some exceptions. Amazon stock jumped 10% after strong web services growth suggested that its AI spree is paying off. But Meta's CEO missed the mark with talk of a theoretical path toward "superintelligence" and plans to "aggressively front-load building capacity, so that way we're prepared for the most optimistic cases." Shares fell 11%, the most in three years.

By Wall Street's tally, earnings beats have resulted in slim gains, while misses have been punished severely. That makes sense, with the S&P 500 trading at an ambitious 25 times earnings. With 90% of results in, the next two weeks will bring reports from a handful of big companies, including **Walt Disney** on Nov. 13, **Nvidia** on Nov. 19, and **Walmart** on Nov. 20.

I recently ran my own screen for earnings-day drama by focusing only on price reactions, which are often more telling than whether earnings topped forecasts. Among companies large and small in the S&P Composite 1500 that have reported since the start of October, I found 106 with double-digit percentage gains and 115 with double-digit declines, many having little to do with AI. Here are a handful:

Trex stock got taken behind the PVC woodshed. The decking company built its business on composite boards made from sawdust and recycled plastic shopping bags, which it pitches as more durable than pressure-treated lumber. Customers are increasingly being lured by brands like TimberTech, which dispense with wood altogether in favor of polyvinyl chloride patterned to resemble mahogany, teak, or hickory. After Trex cut guidance due to soft housing conditions and more competition, shares lost 31%.

Newell Brands extended a decade-long downtrend, losing 28% in a day following a sales decline. The maker of Sharpie markers and Rubbermaid containers says it raised prices in response to tariffs, but rivals declined to do the same. Contrast that with **Winnebago Industries**, which bounced 29% after it used price increases to offset weak recreational-vehicle demand.

Is a trucking turnaround afoot? Maybe not yet, judging by freight volumes. But cost-cutting and solid earnings sent **J.B. Hunt Transport Services** shares up 22% and logistics provider **C.H. Robinson Worldwide** up 20%. Next year, new federal restrictions on commercial driver's licenses for non-U.S. citizens could cut trucking capacity and lift prices.

Chipotle Mexican Grill blamed a burrito shortfall on young five-digit earners struggling with student-loan payments and slow wage growth. Shares lost 18%. **Wingstop** reported a same-store sales decline, but shares gained 11% on plans for kitchen renovations and a loyalty program.

General Motors gained 15% and **Ford Motor**, 12%, on healthy demand for gasoline vehicles and plans to cut losses from electric ones. And **Hertz Global Holding** is the biggest one-day gainer of the season so far, soaring 36% after reporting its first profit in two years, on a bustling new business retailing cars from its rental fleet.

Let's turn to the struggling beer business, and one brewer's, um, innovation. Three years ago, **Molson Coors Beverage** collaborated with **Coca-Cola** to launch Simply Spiked, fruity drinks with beer-like alcohol of 5%. Earlier this year, Coors added Simply Spiked Bold, whose "unapologetically bold attitude" brings 8% alcohol. Any guesses what's next? At a convenience-store conference last month, the company unveiled Simply Spiked Bolder, with smaller cans and 12% alcohol.

This compares with the firepower of the sweet screw-cap stuff in flask-shaped bottles sold quite profitably by liquor stores and downed from paper bags. **Constellation Brands**, known for Corona and Modelo beer in the U.S., started out in bulk wine and found success in 1954 with Richard's Wild Irish Rose, which it sold in 2019 to Gallo. The new Coors offering isn't classified as a fortified wine, but rather as a malt beverage—never mind that the alcohol comes from fermented cane sugar, not malted grains. That allows it to be sold in beer coolers. Apparently, two things bucking the current beer downdraft are nonalcoholic brews and turbocharged fruit punch.

Goldman Sachs calls long-struggling Molson Coors a Buy. It isn't for the 12% alcohol, but rather the price/earnings ratio of eight—and that next year's Olympics, World Cup, and 250th U.S. birthday could give beer a boost. B

Turning 40? Buy a House.

Is buying a house just for middle-agers? For the first time, the median age for initial home buyers has reached 40, up from 30 in 2010.

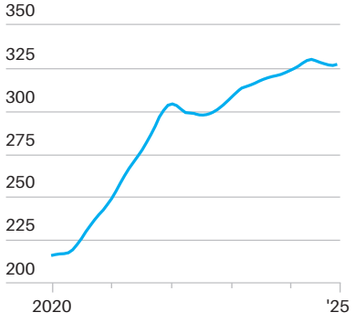
Home sales have been ailing, hit by high prices and mortgage rates. According to the National Association of Realtors' 2025 profile of home buyers and sellers, first-time buyers are becoming owners at an age when homeowners in 1997 were already trading up. "It feels like something has shifted in the housing market," says Jessica Lautz, the NAR's deputy chief economist and vice president of research. "I don't know if we can move backward [in age] unless we have a substantial change, like more-affordable housing inventory."

NAR data chronicle a stuck housing market: The share of all-cash buyers, at 26%, is tied with 2024 for highest on record, while the share of first-time buyers, at 21%, is a low. Repeat buyers put a median 23% down on their purchase, the highest since 2003. First-time buyers put down 10%, the most since 1989. And sellers' tenure in their homes grew to 11 years from 10 last year. "People just want to stay put," says Lautz.

There's a bright side. Mortgage rates are below the 6.7% one-year survey period average. Fixed 30-year rates measured by Freddie Mac are down to 6.22%, meaning those with a $400,000 loan will save more than $100 a month compared with the survey average. But, she adds, the decline is unlikely to improve demand on its own. **–Shaina Mishkin**

Up and Away

The National Case-Shiller Home Price Index has significantly increased since the pandemic.



Note: Data is seasonally adjusted.

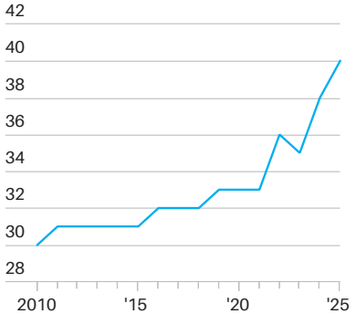
A Red Flag

The median age of first-time home buyers has grown by a third since 2010.



Source: National Association of Realtors

LAST WEEK

Markets: Oil prices rose as OPEC+ paused plans for increasing output. The government shutdown continued, U.S. manufacturing shrank for the eighth straight month, and stocks flagged on artificial-intelligence worries, sending shares of **Palantir Technologies** down despite record revenue. Democrats swept state and local elections, and the Supreme Court appeared skeptical of President Trump's tariffs. On Thursday, the S&P 500 index fell 1.1% after private-sector data showed big layoffs. On the week, the Dow industrials were down 1.2%; the S&P, 1.6%; and the Nasdaq Composite, 3%.

Companies: Tesla shareholders rewarded Elon Musk with a trillion-dollar pay package. The White House said **Nvidia** has to reserve its most advanced chips for U.S. customers—not Chinese—and sealed a deal with **Novo Nordisk** and **Eli Lilly** to cut the cost of anti-obesity drugs. The Federal Aviation Administration reduced air traffic by 10% because of the shutdown.

Deals: A Delaware judge denied **Pfizer**'s attempt to block Novo Nordisk's **Metsera** bid...Shale producers **SM Energy** and **Civitas Resources** agreed to a $12.8 billion merger, including debt...**Eaton** acquired Boyd Thermal's liquid cooling unit for $9.5 billion...**Coeur Mining** bagged **New Gold** for $7 billion....**Starbucks** sold 60% of its China unit to Boyu Capital for $4 billion...**Kimberly-Clark** agreed to buy Tylenol maker **Kenvue** for $49 billion, including debt...**Charles Schwab** is buying private-shares platform **Forge Global** for $660 million.

THIS WEEK

Monday 11/10

Earnings reports from artificial-intelligence players will continue on Monday with "neocloud" company **Coreweave** reporting, followed by nuclear upstart **Oklo** on Tuesday and networking firm **Cisco Systems** on Wednesday. Noteworthy AI firms have reported mixed results in recent weeks, as some on Wall Street express concerns about surging valuations among stocks that could benefit from the AI buildout.

Tuesday 11/11

The major U.S. stock exchanges will remain open on Tuesday; bond markets will be closed for Veterans Day.

Thursday 11/12

Walt Disney will headline this week's earnings reports. Analysts polled by FactSet expect the firm to report September-quarter non-GAAP earnings of $1.05 a share on revenue of $22.76 billion. Shares have traded sideways this year.

Friday 11/13

Wall Street was slated to get key updates on inflation this week, but the shutdown has halted government data releases. The producer price index for October was slated for Friday, which would have followed the consumer price index on Thursday.

Trump's Power Looks To Be Slipping. What Could Come Next.

A difficult week for the administration is a sign of bigger changes to come. They could take markets by surprise.

BY MATT PETERSON

Tuesday's election results prompted a rare admission from President Donald Trump: Something had gone poorly for him.

"The shutdown was a big factor, negative for the Republicans," he told his party's senators in a dissection of Tuesday's Democratic sweep of votes in New York City, New Jersey, Virginia, and California.

The Supreme Court appeared to pile on. Conservative justices probed the government's justification for tariffs at a closely watched hearing on Tuesday.

It is notoriously difficult to forecast Supreme Court rulings, but the politically challenging events of the past several days suggest that the Trump administration is going through a moment of transition. A president who has reveled in his ability to single-handedly direct policy—often prompting stocks, bonds, and the dollar to swing rapidly—now suddenly finds himself more constrained.

Investors may take immediate comfort from that, since the status quo has allowed stocks to hit records while producing relatively low and falling bond yields. But the shift in U.S. politics poses some long-term worries, too. Trump personally may find his power weakening as the midterms approach; meanwhile, the other side is learning from his strategy.

A new breed of Democrats is willing to seek and wield power in unprecedented ways, too. That could upend the environment that has allowed investors to keep focused on the promise of artificial intelligence and interest-rate cuts from the Federal Reserve to the exclusion of the political chaos.

That policy environment is relatively stable for the moment, although the Supreme Court's skepticism of tariffs poses a wild card. At the hearing, Trump-appointed justices asked whether tariffs weren't really the sort of tax-and-spending policies that the Constitution leaves to Congress, not the president.

The tens of billions of dollars in revenue raised by tariffs so far have been essential to the fiscal story the government is telling. The deficit is set to drop to 5.9% of gross domestic product from 6.4% last year, Treasury Secretary Scott Bessent said recently. "If we are contracting spending, then I would think inflation would be dropping. If inflation is dropping, then the Fed should be cutting rates," Bessent told CNN on Nov. 2.

Some in the markets have worried that a Supreme Court ruling that invalidated the tariffs would threaten that trend, by eliminating a source of revenue and putting the deficit on a worse trajectory.

But the case may be overstated. "As important as this Supreme Court case is, it is unlikely to change the tariff strategy and the desire to use that revenue going forward," says Greg Peters, co-chief investment officer of PGIM Fixed Income. The Trump administration is likely to move swiftly to impose alternative tariffs based on different legal authorities that would keep the money flowing into the Treasury.

Nonetheless, the administration would find itself on the back foot on its signature policy. It may find enough revenue to satisfy the bond market, but countries that have been forced to the negotiating table may be reluctant to make or uphold concessions knowing that the president's power is in question. That could slow the flow of trillions of promised investment dollars in the U.S. economy.

Trump also finds himself constrained in Congress. The Senate recently passed a resolution that would end the emergency used to justify many of his tariffs. The measure won't ever reach Trump's desk because the House is opposed, but it is a potent political symbol.

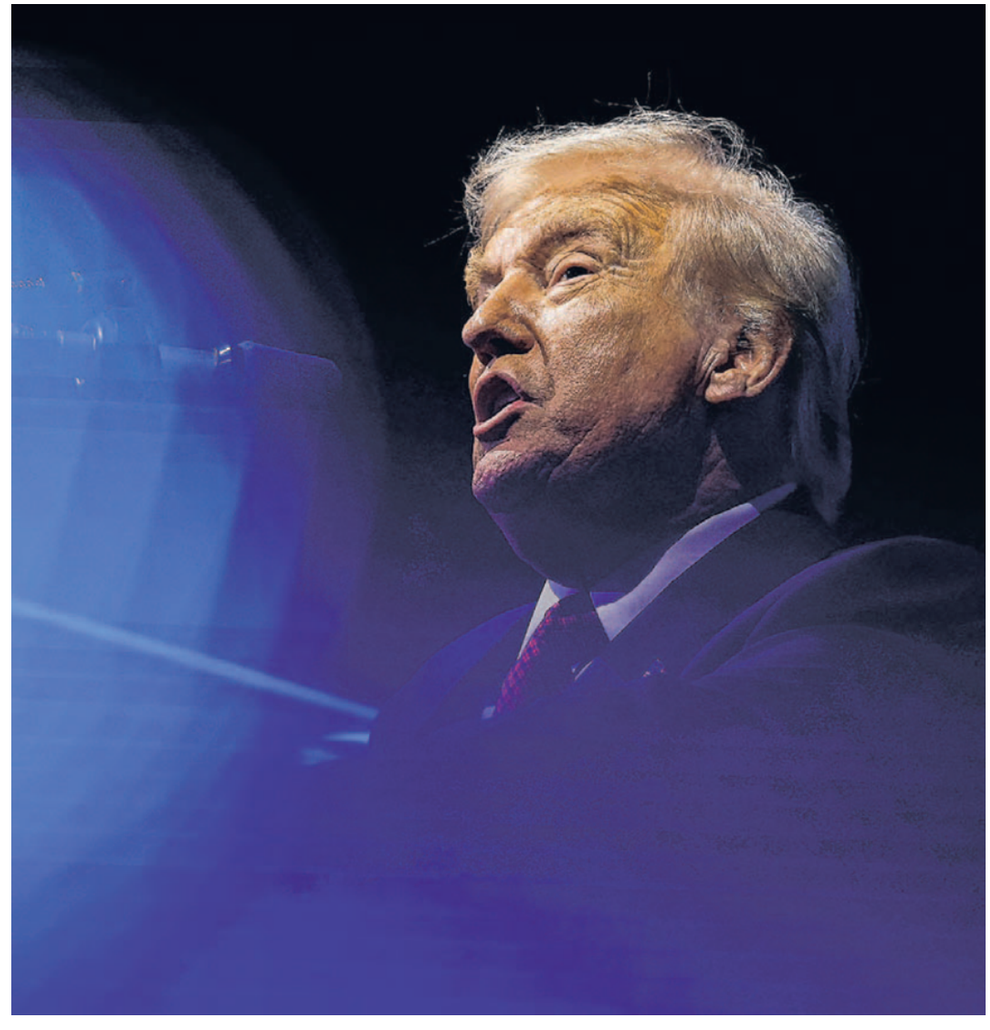
Republican Senators have also resisted Trump's demand to end the filibuster, which requires 60 votes to pass most legislation. After Tuesday's elections, the "strong Democratic performance could end up making some Republicans less willing to go along with Trump out of self-preservation ahead of the midterms," write Lew Lukens and George Pollack of research firm Signum Global Advisors in a note to clients.

Trump has a knack for finding surprising new ways to get his wishes, and it would be unwise to count him out based on a good night for a few of his opponents. But in the bigger picture, the elections signal that Trump may not always be the loudest politician in the room.

"Trump is no longer the only Trump," says Ed Price, nonresident senior fellow at New York University's Center for Global Affairs.

Among the new ones is Zohran Mamdani, the charismatic young democratic socialist elected as New York City's next mayor. He won on expensive policy promises that will be difficult to keep.

He wants, for instance, the city to issue $70 billion in debt to build new affordable housing, a plan that would exceed the debt cap in the state's constitution—a problem he plans to fix by



President Donald Trump has a knack for finding surprising new ways to get his wishes, and it would be unwise to count him out.

removing the cap.

Likewise, California's Gov. Gavin Newsom won a measure to redistrict the state in favor of congressional Democrats. He pitched that plan as fighting "fire with fire"—beating Trump at his own game. The president is pushing Texas and other states to hand seats to Republicans to give the party an edge in the midterms, which tend to go against the party in the White House.

Former Vice President Kamala Harris's failed presidential campaign promised small change while pledging at least lip service to cutting the deficit. (In truth, her spending plans would have exacerbated it.) The next Democratic standard-bearer is unlikely to constrain him- or herself that way. Harris pledged a convoluted tax break to help first-time home buyers, for instance. That kind of modest ambition won't fly again in the wake of Mamdani's unapologetic demand to "freeze the rent."

The lesson—that Democrats win against Trump by becoming Trump—has some uncomfortable implications while inflation remains stubbornly stuck at 3%.

The Fed under Chair Jerome Powell is already rethinking its plans for rate cuts in December and beyond, in light of the risk of a resurgence in inflation. But Powell won't be in control for much longer. His term as chair will end, and Trump has pledged to replace him with a candidate who has committed to further rate cuts.

The trouble with that policy isn't that it would hurt the market, at least not at first. Easier money will probably boost the price of stocks and crypto. The problem is that once the norm of an independent Fed is broken, no politicians will find it in their interest to take the punch bowl away. That will be true of a Trump-ier Democratic Party just as it will be true of Trump himself.

Trump's winner-takes-all attitude to governing has raised the stakes of U.S. politics. He has used his authority in many ways to help the market, by slashing regulation and lowering taxes. But the trouble with changing the rules of the game is that the other side won't play by them anymore, either. Trump has set off a competition for power that rewards simply winning far more than sound policymaking. How long that continues to support a strong economy and healthy markets is anyone's guess. B

The Dow Nears 50,000. How We Got Here.

Financial crises, a pandemic, and inflation have been mere blips in the relentless upward march of stocks.

BY KENNETH G. PRINGLE

Traders at the New York Stock Exchange commemorate market milestones with hats.

Getty Images

The first million is the hardest, the rich like to say.

For the Dow Jones Industrial Average, now nearing 50,000, the first 10,000 was the hardest.

It took a 103-year slog through market crashes, depression, and inflation to reach that "once-unthinkable milestone," as The Wall Street Journal called it on March 30, 1999.

"Dow Industrials Top 10,000," the Journal proclaimed across page one that day, as did newspapers across the nation. "Longest Bull Market on Record Smashes a Historic Barrier."

The milestones that fell at 20,000, 30,000, and 40,000, coming in rapid succession beginning in 2017, were greeted with less fanfare. The significance of the Dow, once the heartbeat of Wall Street, was questioned.

Now, with Dow 50,000 in sight, it stands as a symbol of what some consider a roaring bull market built on the revolutionary potential of artificial intelligence. Others believe it's a historic bubble. The index slipped this past week to 46,987.

All the same, 50,000 is too big and round to ignore, a standout even in a season of round numbers (Nvidia hitting $5 trillion in market capitalization, the S&P 500 nearing 7000).

It is a number Charles Dow could hardly have imagined for the industrial average he established on May 26, 1896, with 12 stocks. Their share prices, averaged out, came to 40.94. A railroad-heavy precursor, started 12 years earlier, evolved into the Dow Jones Transportation Average.

The industrials first surpassed 100 on Jan. 12, 1906, to little notice.

The Dow hit a 381.17 high on Sept. 3, 1929, reaching what Yale economist Irving Fisher said "looks like a permanently high plateau."

The market crashed in October.

The Dow tumbled all the way to 41.22 in 1932. The high wasn't regained until 1954.

Twenty-eight years later, on Nov. 14, 1972, the Dow crossed the 1,000 threshold after testing it numerous times. The reception was tepid, reflecting those inflationary times.

Investors greeted Dow 1000 with "about the same degree of enthusiasm they'd accord news of a record run in cricket," columnist Alan Abelson wrote in *Barron's*.

But inflation was tamed by the early '80s, setting loose a bull market that pushed the DJIA to 5000 by 1995 and—supercharged by the dot-com boom—over 10,000 just four years later, on March 29, 1999.

This was news everywhere. "Where to now, mighty Dow?" the Austin American-Statesman of Texas.

The boldest prediction was *Dow 36,000*, a best seller that captured the "irrational exuberance" of the market that Fed Chairman Alan Greenspan had warned of a few years earlier.

There were skeptics, among them Robert Shiller, another Yale economist, who suggested that valuations were stretched.

"It is certainly plausible the Dow will not be above 10,000 in 20 years," Shiller told USA Today.

Shiller looked prescient during the dot-com bust that was just around the corner, and the 2007-09 recession, when 10,000 failed to hold. The Dow plummeted to a post-recession low of 6547.05 on March 9, 2009.

It got back to 10,000 in October 2009, to great relief.

"Whew! Dow closes above 10,000," the El Paso Times of Texas wrote of "Wall Street's comeback."

This time, the market wouldn't look back, reaching 15,000 by 2013 and racing to 20,000 four years later, on Jan. 25, 2017. The achievement didn't get the conquering-hero treatment.

"Fake news," Financial Times columnist John Authers called it. He was among a growing chorus arguing that the Dow no longer represented the market due to its methodology, with just 30 stocks weighted by adjusted share-price average.

Most news sources treated the milestone as an afterthought. *Barron's*, however, was looking ahead.

"Next Stop: Dow 30,000," was the magazine's cover story on Jan. 30, 2017. "[T]here's no reason the Dow Jones Industrial Average can't exceed 30,000 by the year 2025."

In fact, it came five years earlier.

The Dow was racing toward 30,000 in February 2020 when news broke of a deadly new virus. Covid-19 would have a devastating effect on all aspects of American life, and the stock market wasn't exempt.

The Dow suffered two of its six-largest single-day percentage drops during the crash, shedding nearly 13% on March 16 and 10% on March 12. It fell to 18,591.93 on March 23.

Yet, despite the magnitude of the declines—the rest of Dow's top six single-day drops include three sessions from 1929, and Black Monday of Oct. 19, 1987—the recovery was swift.

"Dow crests 30,000 points on vaccine hopes, Biden transition," the Sioux City Journal of Iowa wrote on Nov. 25, 2020.

The focus this time wasn't on the legitimacy of the Dow. It was on the speed and power of the rally, happening despite deaths and lockdowns.

"Investors have become uninterested in worrying about downside risks," wrote Tobias Levkovich, chief U.S. equity strategist at Citigroup.

Barron's didn't make a 40,000 prediction. That milestone took another 3½ years to reach, on May 17, 2024.

The achievement didn't even win headlines in many places. *Barron's* May 20 print issue noted it on page 9.

Considering that Dow 50,000 has approached in something like half the time it took to go from 30,000 to 40,000, it's hard to see Wall Street breaking out Champagne for this one, either. That's especially so since the gains from 10,000 in 1999 to 50,000 now would work out to just 6.4% annualized, below the norm for stocks.

But if the recent pace keeps up, even Dow 100,000 could be here in a few years. Maybe it will take Dow 1,000,000 to create some excitement.

After all, the first million is the hardest. B

The Round-Number Effect

The Dow increased after each of the past four milestones.

Dow Milestone	Date Reached	One-Year Gain
10,000	3/29/1999	10%
20,000	1/25/2017	32%
30,000	11/24/2020	19%
40,000	5/17/2024	7%

A Can-Do Stock for Thirsty Investors

Crown's low valuation, hefty cash flows, and big-name customers could help the canning giant's stock pop 30%.

BY TODD CHANKO

Dreamstime

Heineken and Coca-Cola are household names that rely on Crown to manufacture packaging for their products.

When William Painter invented the metal bottle cap in 1892 and founded Crown Cork & Seal Co.—now known as **Crown Holdings**—he ushered in what is now a $66 billion industry. By an uncanny coincidence, **Coca-Cola** was incorporated that same year.

Today, Crown Holdings serves not only the canned beverage sector but also industries as diverse as vegetables, face creams, and aerosol sprays. If you receive a tin of Danish cookies or panettone this holiday season, the festive container was probably manufactured and embossed by Crown.

The company even ensures that its range of products—and those of other industries—arrive at their destinations damage-free through its Transit Packaging segment, which contributed 18% of its $11.8 billion 2024 sales. Heineken, Coca-Cola, WD-40, and even Barbasol are household names that rely on the company to manufacture packaging for their products.

For investors, Crown offers a refreshing alternative to artificial intelligence, rare earth, technology, or defense/aerospace stocks. Its 12-month forward price/earnings ratio of 12.1 is half what it was as recently as last year, as tech stocks stole the show. And this is despite a free-cash-flow yield of 11.4% and third-quarter earnings-per-share growth of 13% year over year.

Even more enticing than a cold High Noon Hard Seltzer on a hot August night (yes, in a can also manufactured by Crown), the company continues to repurchase its own stock, having bought $314 million worth of shares through the third quarter. "When combined with dividends, we've returned more than $400 million to shareholders this year," said Kevin Clothier, the company's chief financial officer, on Crown's third-quarter conference call last month. That adds up to nearly $3.47 a share for the first nine months of 2025—about a 3.7% yield.

Management has consistently guided conservatively, underestimating 63% of the past 10 years' reported earnings. This makes its upward revisions last month noteworthy. Crown raised 2025 full-year earnings guidance by 12%, to $7.75 per share, and free cash flow by 25%, to $1 billion.

Crown also provided transparency on the U.S. tariffs that are haunting companies in nearly every sector. Clothier cites the "tariff-weary Mexican consumer" as one of the factors contributing to a "15% volume decline across Brazil and Mexico." One of the coldest Brazilian winters in 20 years didn't help, either: Heineken blamed lower temperatures in southern Brazil for a decline in consumption.

Crown's operations in Europe can help mute the effects of tariffs. Contributing a 27% increase in income from a 12% increase in shipments during the third quarter, its European segment saw broad-based activity across regions, particularly in the Mediterranean during the summer tourist season. A crop of new brands in the Gulf states is also driving growth.

True to temperament, management reminded Wall Street analysts that a growth rate of 12% in its European markets isn't sustainable, though it reassured them that a compound annual growth of 4% to 5% is. Crown's European business should continue to grow in volume and income, driven by the solid cash flows generated by the can business, ample capacity, and expanding demand for canned beverages and other products.

Moreover, despite "the pinch of higher tariffs" felt by consumers and businesses in Asia, that region still delivered margins above 17% on earnings before interest, taxes, depreciation, and amortization, or Ebitda, despite a year-over-year dip of 3% in Southeast Asian volumes. Imagine how robust the business could be without a tariff overhang.

However responsive Crown has been to myriad challenges throughout its 130-year-plus history—two world wars, the Great Depression, changing tastes, and heightened sensitivity to environmental concerns—it could yet encounter more intractable headwinds. Its global footprint, spanning 189 facilities across 39 countries, is both an advantage and Achilles' heel, with plants in Myanmar, India, China, Turkey, and Tunisia particularly susceptible to political upheaval.

Climate change may also present ever-growing problems, with weather anomalies not only weighing on consumer activity—to wit, Heineken's aforementioned chilly experience in Brazil—but also potentially disrupting manufacturing and shipping. Additionally, aluminum, the core raw material of Crown's business, is exposed to tariff, climate, and regulatory risks.

Crown's balance sheet is less leveraged than its peers, at about 2.5 times net debt to Ebitda compared with 3.4 times for **Silgan Holdings** and 2.8 times for **Ball Corp**. Crown's stock is also outperforming these peers, up 17.5% this year compared with declines of 26% and 15% for Silgan and Ball, respectively.

Using a discounted cash flow approach for valuation, we arrive at a 12-month target price of $125. If Crown's overseas markets continue to thrive, the stock could win an expanded P/E multiple of 16. That would put the stock at $128, based on projected 2026 earnings of $8.02—3.5% above management's 2025 earnings estimate. Blending these two approaches, the company could reach $126 within a year—or 30% above its recent price.

That's a lot of six-packs of your beverage of choice. B

Crown Holdings

Corning CEO Wendell Weeks: "We think we can be the best in the world at this."

Corning's Contrarian Push in Solar Energy

The storied glass maker is opening a massive factory in Michigan to make a critical component of solar panels. Who said solar power is dying?

BY AVI SALZMAN

Just off a rural road in Michigan near a pumpkin stand, workers for industrial company **Corning** are assembling a one-of-a-kind solar energy plant. The towering gray warehouse complex is the company's largest American operation, even bigger than the Kentucky factory where it makes glass for iPhones and Apple Watches.

The site is abuzz with activity. Even as the walls and roads are being built outside, workers inside are churning out products. Using intense heat and precision cutting tools, they're turning chunky polysilicon rocks into perfect squares the size of hotel waffles. The finished product is as thin as a human hair.

Those slim squares, known as wafers, are the building blocks of solar panels. America hasn't made them for a decade, even though solar energy accounts for the country's largest share of new electricity generation. Solar is just another industry that the U.S. outsourced to Asia. As of the most recent government data, China controlled 97% of wafer production.

The Michigan plant is a bet that America can take that business back. Already, Corning is churning out thousands of wafers a day, on the way to producing more than one million a day. The new factory is the final link in America's solar supply chain, allowing companies to produce fully domestic solar panels for the first time in at least a decade.

In a tour of the factory this past week, Corning CEO Wendell Weeks told *Barron's* that solar could become the company's next major business line, driving at least $2.5 billion in annual sales for the company—more than even Corning's well-established auto-parts division. He expects to grab up to 15% of the U.S. market for wafers. "We think we can be the best in the world at this," Weeks said.

The factory is a gamble for Corning, which has built its business over the past 174 years making specialty glass and ceramics. The Corning, N.Y.–based company has other growth opportunities that look like much safer bets. Corning announced this year that it will make all of the glass for **Apple** iPhones and watches in the U.S., and build **Microsoft**'s next-generation fiberoptic network. In its latest quarter, sales jumped 58% in the division that includes data-center supplies.

Solar manufacturing, by comparison, is a risky enterprise that has regularly led to financial ruin for other companies. U.S. companies that have tried to go head-to-head with China in solar have repeatedly failed, because Chinese companies benefit from strong state support, lower wages, and a much more advanced renewable manufacturing sector. Just this past June, U.S. subsidiaries of Swiss solar firm Meyer Burger Technology filed for bankruptcy, shuttering an Arizona factory after shelving plans for one in Colorado.

The outlook for solar has only grown worse since then. President Donald Trump and the Republican-controlled Congress eliminated subsidies for solar installations in the big tax bill they passed in the summer. Trump has thrown up additional roadblocks to renewable energy while diverting government money to coal plants, solar's competitors.

Weeks, who is a lanky 6 feet 5 inches tall, acts giddy on the factory floor, chatting with employees just steps away from towering machines churning out products at 1,450 degrees Celsius. He briefly breaks into the song "Popular" from *Wicked* when asked about the company's recent string of successes with Apple and other customers. But he also knows what he's up against in this new business line.

"When I talk to the folks on the floor, I glow. I mean I'm just over-the-moon happy," he says. "When I walk in and I see all the equipment that's not running yet, my heart goes pitter-patter. Not in a good way."

The Factory

Hemlock is a small town located in the crook of the Michigan mitten, between the thumb and the fingers. Far from cities like Detroit and Grand Rapids, it can seem like it's in the middle of nowhere. But that's not quite true. The region has long been prized by chemical companies for its geologic features. Its brine deposits—useful in the production of bleach—drew Dow chemical founder Herbert Henry Dow to the area in the 1890s. He set up the company's headquarters in nearby Midland, where it remains today.

Dow and Corning established a joint venture in 1943 to make silicone and military products in the area. One of the factories the companies built in Hemlock in the 1960s has become the locus of Corning's solar and semiconductor business.

That older facility—just across the street from the new wafer one—is known as Hemlock Semiconductor. It makes polysilicon, a high-purity form of silicon used both in solar and in semiconductors. The Dow Corning venture broke up in 2016, and Corning took majority control of Hemlock in a series of transactions in 2020—doubling its stake to 80.5% for less than $400 million, or about a tenth of what the factory would cost to build today. A Japanese company controls the other 19.5%.

The transaction allowed Corning to get into the solar business on the cheap, just as solar demand started to rise during the Biden administration. Once the original factory was churning out raw materials and profits, Corning had the confidence to move up the value chain to make wafers and compete on a better footing with China.

"I don't like fair fights," Weeks says. Hemlock gave the company an "unfair entry point."

Once Corning decided to expand, the company wanted to do it fast—so fast that it enlisted one of the architects of Operation Warp Speed, the successful effort to quickly get Covid-19 vaccines to Americans. Corning bought an empty soybean field across from Hemlock and was pumping out solar wafers 17 months after the first steel went into the ground. When complete, the site will be the size of 60 football fields, about a third of it covered with buildings.

Today, production is progressing even as buildings are still going up. Construction workers on lifts are installing ceiling tiles next to rooms where factory workers are handling materials. The company trucks raw polysilicon in the form of silver rocks from Hemlock across the street to the

new factory. It loads the raw material into furnaces that melt it. A thin wire hung from about 20 feet above is dipped into the molten goop in the furnace and rotated gradually over the next three days, eventually forming a long polysilicon cylinder known as an ingot. Elsewhere in the plant, workers cut the ingots into ultrathin wafers using diamond wire saws. The process is a mix of manpower and machine. The wafer plant already employs hundreds. Eventually, there will be more than 1,000 people working there.

The Opportunity

Corning disclosed earlier this year that it's spending $1.5 billion on the wafer plant and an expansion of solar capacity at Hemlock. It received tax breaks and a $68 million grant from the state of Michigan, as well as benefits from Trump's big tax bill. Chief Financial Officer Ed Schlesinger says the solar operation should be "cash positive" in 2026, meaning it will be bringing in more money than its capital and operating expenses.

The company's $2.5 billion annual sales target for the division is equal to about 19% of last year's total sales. The number also includes the polysilicon that Corning makes for semiconductors, but Corning says solar accounts for all of the growth.

Corning says the solar business has similar profit margins to its other operations, or potentially better. The company is on track to boost its operating margins to 20% by the end of the year, up from 16% in 2023. J.P. Morgan analyst Samik Chatterjee thinks the solar margins could stretch as high as the mid-20s.

Analysts who cover Corning tend to focus on the company's more high-profile businesses, like the Apple contract or its business making glass for TV screens. But some financial pros are starting to take a closer look at solar as a growth driver. "If they keep to their targets, it definitely has big financial implications," says Chatterjee, who has an Overweight rating on the stock and a $100 price target. Corning shares have risen 86% this year as its tech opportunities have expanded. They were recently trading at $87.

A Global Battle

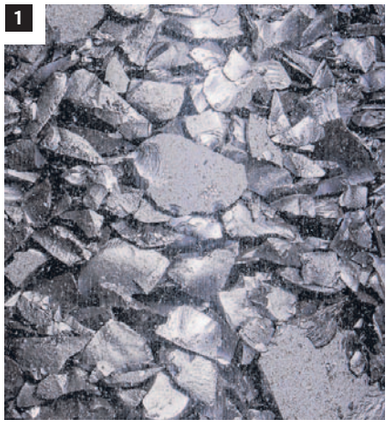
There is real demand for what Corning is making at its new plant, even if Trump has put roadblocks in the way of solar adoption. U.S. utilities are on track to add 33 gigawatts of solar this year, the largest source of new electricity generation. That's roughly enough to power 10 million households. Trump's policies are almost certain to curb solar's growth rates, analysts say. But they won't destroy the industry—solar power is still the fastest way to bring new power to the grid, and among the cheapest.

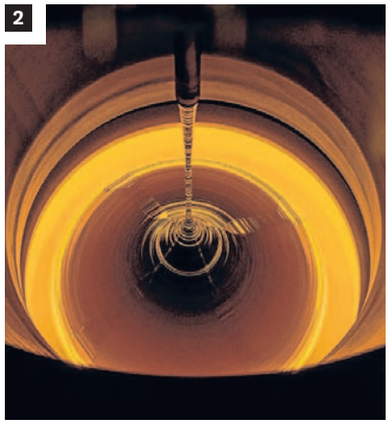
Trump's tax bill removed incentives for installing solar starting next year, although some grandfathered projects are likely to keep receiving incentives for years. The tax bill, however, kept substantial incentives for domestic manufacturing, which Corning expects to receive. Those new rules also make Corning's raw materials more attractive to U.S. companies that are making finished products such as solar panels. The U.S. now has enough solar panel makers to supply just about all of the country's domestic demand. To receive credits, those factories will need to use materials that were made in the U.S.A.

In addition, Trump and President Joe Biden both imposed high tariffs on Chinese-made solar products. Taking into account all of the government policies and other factors, Corning is on track to be the lowest-cost producer of wafers in the world, Weeks says.

Weeks doesn't expect the solar market to collapse. But even if it plateaus, Corning can still succeed by taking market share from overseas producers. The tax bill makes it much more favorable to use domestic products. "You can cut the market by a factor of five," he says. "As long as you want it to be domestically made, we'd be fine."

The Michigan solar factory is ramping up just as renewable energy falls out of favor politically. But Corning has been around for many years, and plenty of its products were unfashionable when they launched. Even if it isn't popular, it already looks like it will be profitable. B





1. The process to make solar wafers starts with polysilicon. **2.** The rocks are heated in a furnace to 1,450 degrees Celsius, forming cylinders known as ingots, which are cut into ultrathin square wafers. **3.** The wafers are inspected and packed up for shipping.

China's Big Bet on Tech

Beijing is doubling down on innovation. That is lifting Chinese stocks and threatening U.S. companies. Can it also rescue China's ailing economy?

BY RESHMA KAPADIA

THE FUTURE OF ROBOTICS, BIOTECHNOLOGY, and artificial intelligence is playing out in hundreds of fully automated labs across China managed by Hong Kong–listed biotech **XtalPi Holdings**. The company, founded in Boston by a trio of Massachusetts Institute of Technology–trained physicists, uses data generated in the labs to train AI models to accelerate drug discovery—garnering partnerships with Western pharmaceutical giants **Pfizer** and **Eli Lilly**.

XtalPi is still quite small, but the company's story points to a major shift under way across China's economy. Long known as the world's factory, China is fast becoming a hotbed of innovation. In medicine, where the country was once content to manufacture drugs discovered elsewhere, it's now developing new treatments for cancer, diabetes, and obesity. At the same time, it's pushing hard for breakthroughs in aviation, robotics, semiconductors, and AI. DeepSeek, the Chinese AI company that shook global markets earlier this year, may have been only the beginning.

"When Chinese investors saw a homegrown AI answer to ChatGPT, it created this sense that China is a competitor—perhaps the only one—to the U.S. in terms of innovation," says Philip Wool, chief research officer at Rayliant Investment Research. "That will be disruptive for Western companies."

Already, China is putting up some big numbers. Its research-and-development spending has been rising by almost 9% a year, compared with 1.7% for the U.S., according to the latest data from the Organization for Economic Cooperation and Development. China filed 70,160 international patents in 2024, well ahead of the 54,087 filed by innovators in the U.S. China installed some 300,000 industrial robots in 2024, almost 10 times the number in the U.S., and it accounts for some two-thirds of all electric-vehicle sales.

The new dynamism has sent the country's stocks flying. After a long slide, the MSCI China index is up 43% this year, more than double the surge of the S&P 500 index. Some money managers see further gains ahead, in both broad exchange-traded funds and specific stocks.

Yet all is not well in China's economy. Far from it. Despite the burst of high-tech innovation, the economy seems mired in a long-term funk. Fixed-asset investment is contracting and retail sales growth is slowing, despite policymakers' efforts to stimulate growth. China's population has been shrinking for three years, and its property market has slumped for more than four years, taking the biggest store of household wealth with it. Mountains of debt weigh on the country. The upshot: Annual economic growth is expected to be down to 3% to 4% for the next few years, versus 6% to 8% in the recent past.

These two pictures of China—a rapidly advancing technological challenger and an economy in decay—aren't as contradictory as they might seem. In fact, they are of a piece. Beijing had to do something about the bleak economy, and its old playbook of pouring money into infrastructure and construction projects to deal with economic slumps was no longer working. Plus, it needed to reduce its reliance on the West for critical technology as its rivalry with the U.S. heated up. It needed something new.

Beijing is turning sectors such as pharmaceuticals, semiconductors, and quantum computing into national strategic priorities and supporting them with heavy investment through subsidies and patient capital for research and development, as well as reforms that cut red tape. Bank of America estimates that China's AI capital spending this year could total 600 billion to 700 billion yuan ($84 billion to $98 billion), with more than half coming from the government.

The high-tech push is sure to put pressure on U.S. companies. Think of it as the second China shock of this century. Much as China's heavy investments in sectors such as steel contributed to the following out of basic manufacturing in the U.S. and elsewhere after its entry into the World Trade Organization in 2001, China's new initiative challenges advanced industries that are drivers of developed economies. That was clear in the strong hand that Chinese leader Xi Jinping played in trade talks with the U.S. last month, using the country's dominance in rare earth minerals and processing as a weapon.

China's previous economic transformation left the country with a voracious appetite for commodities, cars, and capital goods. That, in turn, powered global growth. This time, China's high-tech acceleration may end up much more one-sided, with benefits largely accruing to Chinese players—and those willing to risk investing in them.

Whether China's new drive for innovation can seriously improve its economy is another question entirely. Signs of stress are everywhere: In a recent quarterly earnings call, China Merchant Bank highlighted an 11% decline in consumption among customers, retail loans under pressure, and the fact that 25 of the top 30 Chinese companies were caught in price wars.

Even if the country's property downturn is nearing a conclusion, as some believe, whatever is left of the real estate sector will be a shadow of its former self, perhaps 40% of its original size, says Logan Wright, a partner at Rhodium Group. That will leave a gaping hole in the economy; property previously accounted for about a quarter of gross domestic product.

Beijing's investment in AI, pharmaceuticals, and other advanced technologies probably amounts to under 10% of GDP and won't fill the gap, says Wright. It is, however, a start. China's commitment to tech exports recently prompted Goldman Sachs' Asia team to raise its forecast for China's GDP growth next year by a half-point, to 4.8%.

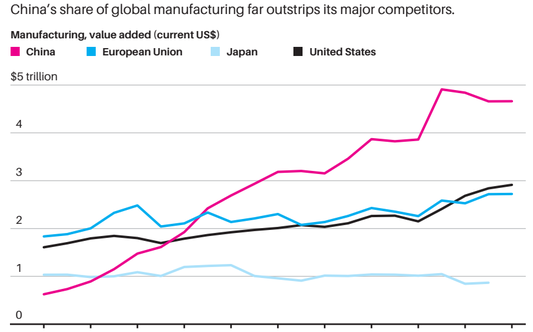
China has seemed reluctant to take the strong medicine many economists suggest: initiatives to get Chinese households to consume more of the goods and services the country produces rather than relying on demand from the rest of the world. China provides 27% of global investment—the most of any country—yet accounts for just 12% of global consumption.

But there are signs that China may be ready to finally make some much-needed economic adjustments. In October, the Central Committee of the Chinese Communist Party unveiled a five-year road map that suggested it recognized the need to spur consumption—a notable shift. The road map hinted that policymakers may do more to get households spending, including directing more resources to public services. Already in the works: cash transfers to parents of young children and aid for families with disabled seniors.

"There's a minimum level of economic activity needed to maintain social stability to be a superpower in technology and military—and with property tapped out and investments running into constraints and exports becoming unreliable, the only option is consumption," says Rory Green, head of China research for TS Lombard. "It's the last—and hardest—lever to pull,

Manufacturing Success

China's share of global manufacturing far outstrips its major competitors.



Source: World Bank Group

but they are finally recognizing it."

Meaningful structural shifts clearly will require time and resources. For instance, the buildout of a safety net that would persuade the Chinese people to save less and spend more could cost nearly a third of annual GDP, Rhodium estimates.

Meanwhile, China's leaders hope they can sidestep those costly measures with a narrower bet on technology and industrial advances to lift productivity and ease the country' ills, much like in the U.S.

China's latest five-year plan urges policymakers to adopt "extraordinary measures" to fuel breakthroughs in critical areas such as semiconductors and high-end equipment and to break the country's dependence on the U.S. and others while building on its leverage, such as in critical mineral reserves and resources.

"China can kill two birds with one stone by going 'all in' on technology and productivity strategies," says Jorry Nøddekær, a fund manager for the Polar Capital Emerging Market Stars fund, who thinks the approach can help China become more independent of the West's technology and repair its economy. Nøddekær says he has substantially increased allocations this year to new China economy sectors like the internet, advanced industrials, pharma, and biotech.

China's ability to absorb tariffs and navigate U.S.-China tensions by flexing its dominance in rare earths left officials more confident that they can pull off the high-tech strategy, according to geopolitical consultants who have visited China in recent weeks. Indeed, China's exports rose 8% in September compared with a year ago, even as the trade war prompted a 27% fall in shipments to the U.S.

Restrictions imposed by its adversaries are accelerating China's push to innovate. China can't surpass the U.S. and its allies in the most advanced semiconductors, which require technology from companies such as **Nvidia** and the Netherlands' **ASML**. Their exports are tightly controlled.

But China is making inroads in midlevel chips and parts of the AI ecosystem, such as optical wiring, components, and other hardware. One example is China's largest chip foundry, **Hua Hong Semiconductor**, which provides chips for a range of consumer technologies.

Global fund managers have a long list of companies they are tracking to keep tabs on China's innovation, even some they are restricted from owning: DJI, on U.S. blacklists, is a leader in drones; **Mindray**, a medical monitoring and imaging company, is making inroads in markets once dominated by U.S. companies; and **Geekplus** specializes in autonomous mobile robots that have transformed warehouse fulfillment centers and the transport of industrial materials.

Strategists and fund managers see the potential for a new bull market, even if this rally needs a period of digestion.

"What sets [Chinese companies] apart are extraordinarily lean operational cost structures, exceptionally tight value propositions for extremely demanding customers, and much shorter product iteration cycles compared with global peers," says Zak Dychtwald, founder of research and advisory firm BridgeWorks Global. "The fierceness and price and cost demands of China's markets make the winners emerging from here far more globally fit than most any other country's environment will produce."

Western businesses, for their part, face a triple whammy when competing with China. Chinese companies are nibbling at their market share in secondary markets such as Brazil and Australia and emerging as fierce rivals at home. In addition, their businesses in China are increasingly challenged amid rising tariffs, the risk of retaliation, slowing growth, and changing preferences. **Starbucks** said this week that it would sell control of its operations there to an Asian private-equity firm. The coffee giant, which entered China in 1999, has faced increasing competition from domestic rivals such as Luckin Coffee in recent years.

And while Chinese companies are going global, they are increasingly buying local. Policymakers are pressuring businesses to buy from domestic suppliers. For instance, Reuters reported this past Thursday that Beijing banned foreign AI chips from Nvidia, **Advanced Micro Devices**, and **Intel** from government-funded data-center buildouts.

That shift could keep trade tensions front and center. As companies such as electric vehicle-maker **BYD** move into advanced economies, policymakers there are pushing back with tariffs and taking a page from China's industrial policy playbook. For instance, the U.S. is funding Intel and taking stakes in critical minerals companies. The Dutch government recently seized Nexperia, whose chips are used in cars and consumer electronics, on economic security grounds.

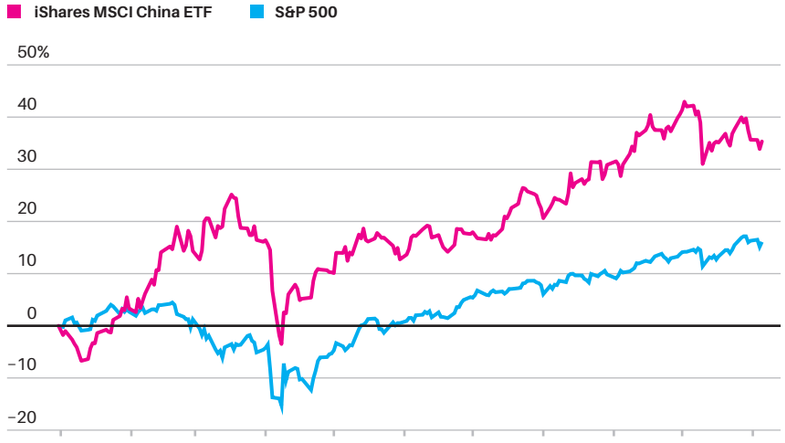
Similar moves worked for China and may help the U.S., says TS Lombard's Green. But it will be difficult, he says, to "beat China at their own game where the system is set up for big top-down objectives, incentives are aligned, there are no elections, and policy is consistent."

Geopolitically, recognition of China's growing force in technology—of the risk of a second China shock—could reinvigorate global alliances as Western countries join forces to protect themselves. One recent example: U.S. deals with Malaysia, Australia, and Japan to find alternatives to China's rare earth dominance.

But while China can create headaches for global multinationals and Western policymakers, it may well create opportunity for investors as Beijing boosts spending in critical sectors.

Chinese Exceptionalism

U.S. stocks have done well this year. China's are doing better.



Unquestionably, China's stock market has come to life this year. Many foreign investors had deemed it uninvestible amid Beijing's harsh Covid-era lockdowns, costly crackdowns on education and internet companies, and geopolitical tensions. But a stronger effort among policymakers to steady the economy, followed by innovation wins like DeepSeek, jump-started a powerful rebound last fall. The market is no longer dirt cheap, with the MSCI China now trading at 14 times next year's earnings, but that's still well below the S&P 500's 22.5.

Chinese stock rallies often fade after a year or two—and this one is about to hit its first anniversary. But Gavekal analyst Thomas Gatley notes that trading volumes are higher now than when the rally started in late 2024. This rally, he notes, unlike previous ones, isn't predicated on policy support from the government but rather on earnings improvements in sectors like those tied to AI.

Also encouraging: Chinese bank deposits total CNY165 trillion, compared with a stock market value of about CNY100 trillion, indicating, says Gavekal, that a lot of money is sitting in low-yield deposits that could eventually trickle into stocks.

Gatley sees room for more gains, suggesting to clients in a recent note that they overweight China's information-technology sector and companies like **Tencent Holdings** and **Alibaba Group Holding** over the broader index. The **iShares MSCI China Multi-sector Tech** ETF is up 39% this year.

TS Lombard's Green also sees more opportunity, especially with foreign investors still owning less in China than their benchmarks. Green takes legendary investor and longtime China bull Jim Rogers' advice: Buy what the Chinese are buying—and right now, that is largely services. Meditation retreats and niche luxury brands, often domestic, remain popular, along with travel.

Of course, there's one other thing Chinese households may load up on if Beijing succeeds in bolstering its economy and accelerating innovation: Chinese stocks. If domestic investors look to stocks as a place to park their cash, China's stock rally could be more resilient than the one in the U.S. B

Inside the Fight for 1-800-Gambler

A legal battle and sharp accusations over the helpline threaten to undermine years of progress in treating gambling addiction in the U.S.

BY NICK DEVOR

Candice Cookson, an operator and trainer at a Cleveland crisis call center, answers calls to 1-800-Gambler from Ohio residents.

Photographs by Daniel Lozada

As sports betting became ubiquitous, so did one phone number: 1-800-Gambler.

The helpline digits appear in fine print on gambling ads and lottery tickets nationwide, offering gamblers an immediate source of support if their play turns problematic. Call volume soared in recent years as dozens of states legalized sports betting and the industry centralized its problem gambling efforts to one point of contact. Some 326,000 calls went to the number over a recent 12-month period, along with another 8,500 texts.

But in September, the helpline was thrown into disarray after a New Jersey court stripped 1-800-Gambler of its national sponsor and millions in donations. The ruling transferred 1-800-Gambler from the National Council on Problem Gambling, or NCPG, to a New Jersey advocacy group that launched the number four decades ago.

The legal battle and sharp accusations among advocates threaten to undermine years of progress in treating gambling addiction in the U.S. At the core of the debate are disagreements around national standards versus individual care.

Any disruption in helpline services can have life-or-death consequences; call-center operators have stories of talking people off a ledge. People with gambling disorders have higher suicide rates relative to other mental health conditions. Research from the American Association on Suicidality has found that helplines significantly decrease crisis states and hopelessness.

"It's just a little bit horrifying to see this happening, because I think we all want the same thing, ultimately, which are our pathways to connect people to treatment or information on this issue that are easily memorable and accessible," says Ted Hartwell, a former executive director of the Nevada Council on Problem Gambling.

Problem gambling treatment faces a scarcity of funding across the country, as *Barron's* has previously reported. The federal government, for its part, has no programs in place for gambling addiction.

In 2021, the National Football League stepped into the void with a $6.2 million grant to the NCPG, which also receives backing from major casino companies and online sportsbooks. The NFL funds boosted the council's revenue by 450% year over year, giving the group the firepower to nationalize problem gambling efforts.

The NCPG used the money to license the 1-800-Gambler number, develop nationwide text and chat features, and spark an advertising blitz. The council, which says it is "neutral on legalized gambling," leveraged industry connections to get big brands on board with the helpline, while lobbying state regulators to mandate use of the number.

The NFL told *Barron's* that its grant "enabled the NCPG to unify helpline access nationwide under 1-800-Gambler, making it easier for anyone, anywhere in the U.S., to get help when they need it." The grant was renewed in 2024, bringing the NFL's promised contributions to $12.6 million.

But as the problem gambling effort grew on a national scale, longstanding local advocates felt sidelined. The Council on Compulsive Gambling of New Jersey, which created 1-800-Gambler in 1983 and still owns the number, began to have second thoughts on its licensing deal with the NCPG after the group imposed requirements on local call centers.

New data-collection efforts from the NCPG also created tension with local groups. In some cases, gamblers were asked to answer survey questions before receiving assistance, according to state advocates in New Jersey, Florida, and New Mexico.

The NCPG and NFL say national data are crucial in the fight against gambling addiction. Local counselors say data collection is incompatible with a need for anonymity, since gambling addicts often experience a level of shame around their behavior.

"If they were sharing identifiable information, I don't think people would share with us as much as they do," says Candice Cookson, who answers problem gambling calls in Ohio and leads helpline operations for the United Way of Greater Cleveland.

Gathering information on 1-800-Gambler callers became a priority for the NCPG after the NFL's investment.

In November 2022, the NCPG's helpline committee prepared a document with data-collection recommendations. "As call centers begin collecting the same key data points and using similar language, it will enable comparisons across states and will give us the ability to spot trends in real time," reads the document, which was reviewed by *Barron's*. Age, gender, race, military service, and information on the caller's relationship to gambling are all recommended data points for collection.

"Data-collection efforts are key to providing NCPG with insights into contact trends, allowing the organization to better advocate for federal funding that supports problem gambling prevention, education, and treatment efforts," the national group said in announcing a renewal of the NFL's multimillion-dollar grant in 2024.

Florida helpline operators, who handled 33,000 calls and texts via 1-800-Gambler over a recent 36-month period, never collected that kind of data and pushed back on the changes, saying that additional friction on calls could result in hang-ups and untreated callers.

This past May, the NCPG cut operators at the Florida Council on Compulsive Gambling out of the national system. The move was "due to FCCG's lack of communication surrounding the Network Contact Center Standards," Jaime Costello, the NCPG official overseeing helpline operations, told the organization in an email viewed by *Barron's*. "Because we are unable to verify whether or not FCCG meets the requirements, we were forced to reroute contacts," Costello wrote.

Florida's removal ran counter to a recent audit conducted for the NCPG, which had lauded the Florida council's helpline operations.

On April 30, the Florida council answered a call to its helpline from a caller who identified herself as Julia seeking help for her gambling problem, according to a recording of the call reviewed by *Barron's*. After nearly a half-hour of the operator answering her questions and assembling a list of resources, Julia revealed that it had "actually been a quality-assurance call paid for by the National Council on Problem Gambling." She praised the operator for his handling of their interaction. "You did awesome," Julia said. "You conducted this call in a manner that is high quality."

By the next day, the NCPG had begun rerouting helpline calls away from its Florida affiliate, according to an official familiar with the decision. Callers with a Florida area code were sent to a call center contracted by the NCPG where critics say disconnects and unreturned messages frequently occur.

Costello says the rerouting was about a lack of communication from the group. As for the audit, she says that "one call does not signify consistent quality care."

Calls from New Mexico numbers saw a similar rerouting in May after the state's problem gambling council also resisted the NCPG's new data-collection efforts.

Before the NCPG rerouted calls earlier this year, Kandace Blanchard, the New Mexico council's executive director, says her call center was picking up 1-800-Gambler calls from New Mexico, Arizona, and Texas. Her operators developed long-term relationships, she says, with frequent callers looking to speak to the same person each time.

Blanchard's helpline also handled calls from the Navajo Nation, whose territory stretches across the New Mexico and Arizona border. She has Navajo-speaking counselors on-call 24/7. A 2014 study found that Native Americans experience more than double the rate of problem gambling compared with the broader U.S. population.

After the rerouting, some Navajo callers to 1-800-Gambler found that no one could understand them. On multiple occasions, Blanchard says, the NCPG's call center was forced to transfer a Navajo-speaker back to the New Mexico line in the middle of the night. The delay in service compromised care, Blanchard says.

Costello says she was unaware of those instances. Her group offers interpretive services through a third party. Blanchard says she flagged the issue to Costello and provided *Barron's* with emails that corroborate her claims.

During a meeting of the NCPG's helpline committee in May, the group's chair said the decision to reroute callers from Florida and New Mexico was made to ensure that they received a certain level of care. He added that the NCPG was "trying to be discreet" about the rerouting, according to a meeting attendee who spoke with *Barron's*.

The New Mexico and Florida councils "refused to provide any documentation that they met any of our standards," Costello says.

The Florida Council on Compulsive Gambling declined to comment.

The dispute over 1-800-Gambler has brought a long-simmering debate to the forefront: whether to nationalize problem gambling treatment even as casinos face a patchwork of state regulations and rules.

While the NFL donation supercharged 1-800-Gambler, problem gambling treatment remains fragmented. There are nearly two dozen state-specific numbers run by local advocacy groups like the New Mexico and Florida councils.

The NCPG and other nationally minded officials believe that gambling's omnipresence in popular culture requires a streamlined helpline system with one memorable number; state-based advocates say problem gambling treatment requires a regional approach tailored to the specific challenges of local communities.

Unification of the helpline system was a longtime goal for Keith Whyte, who spent 26 years as the executive director of the NCPG before he left in January to start a responsible-gambling consultancy firm. "It's an embarrassment in some ways that the field has not been able to unify behind a number," he says. The move to 1-800-Gambler was a crowning achievement for Whyte, but his national system has splintered in the months since he left the NCPG.

In May, gambling treatment advocates in New Jersey began to rethink their licensing arrangement with the NCPG for 1-800-Gambler.

Luis Del Orbe, executive director of the New Jersey council, says he expressed concerns about rerouted calls and the helpline's service quality to the NCPG. When the time came to renew the licensing agreement in 2025, Del Orbe presented a contract with new conditions that gave him final say over routing of calls. The NCPG balked at those terms, and the New Jersey council moved to regain legal authority over its number.

The impasse boiled over into a legal battle that unnerved gambling industry operators, regulators, and advocates. The NCPG warned of serious consequences if it lost control of the helpline. Costello wrote in a sworn legal filing that "if NCPG's access to 1-800-Gambler were cut off, the texting system would also be completely shut down."

Last month, in a small courtroom in Trenton, N.J., the dispute came to a quick resolution. New Jersey Superior Court Judge Douglas Hurd ordered the NCPG to return the phone number to the state's own problem gambling council.

The NCPG's appeal to New Jersey's Supreme Court was rejected on the day of the deadline. Mentions of 1-800-Gambler have been scrubbed from the NCPG's website, which now promotes a less memorable set of digits: 1-800-522-4700.

New Jersey's council has control of 1-800-Gambler once again, and most of the NCPG's dire predictions haven't come to pass. A *Barron's* reporter confirmed that texts to the helpline number were still going through. "The world did not come to an end," Del Orbe told *Barron's* after the handoff was complete. His group has continued to route 1-800-Gambler calls across the country, maintaining the number's primary function.

Acrimony between the two organizations has since escalated. Last week, the NCPG revoked the New Jersey Council's membership in its national affiliate system, *Barron's* has learned.

The NCPG told *Barron's* it took the step because of disparaging comments from the New Jersey council and other behavior that it deemed "prejudicial to the interests" of the national group. Del Orbe didn't respond to a request for comment on the move but has told other state affiliate groups that the NCPG had "used its bylaws to retaliate" against his group.

With control of the number back in Del Orbe's hands, advocates of problem gambling prevention in New Mexico are breathing a sigh of relief. Blanchard says calls from the state to 1-800-Gambler are going to her call center again.

But some state advocates have raised doubts that the New Jersey council has the manpower and experience to run a national helpline that has grown far larger since it was licensed to the NCPG. New Jersey says it has had no issues routing 1-800-Gambler calls to the appropriate state call center.

Since getting control of the number, the New Jersey council, like the national group before it, has used its own standards to justify rerouting calls away from state-based organizations with decadeslong histories of answering helpline calls. The Massachusetts Council on Gaming and Health says it has lost access to 1-800-Gambler calls from the state, with callers now being routed to the state's health department, which offers a more limited set of information.

Amid all of the wrangling, a few things haven't changed. This past Sunday, gambling promos filled NFL broadcasts; 1-800-Gambler remains a staple at the bottom of the ads. B

Matt Trahan at the Cleveland call center that takes 1-800-Gambler calls, which have soared in recent years as online betting platforms proliferated.

THE ECONOMY

While the Bureau of Labor Statistics isn't reporting weekly unemployment claims, underlying data from the states indicate that claims remain low.

The BLS May Be Dark, But the Job Market Is Relatively Bright

BY RANDALL W. FORSYTH

Friday marked the record 38th day of the federal government's shutdown, which meant the Bureau of Labor Statistics didn't publish the official monthly jobs report. But alternative sources of data show that the employment situation was relatively stable in October, the second straight month for which the BLS didn't publish data. The positive picture is notwithstanding a headline-grabbing report of a surge in layoff notices, which don't necessarily translate into sackings.

To be sure, the pace of payroll growth has slowed as the year has progressed, which has prompted the Federal Reserve to resume lowering its policy interest rate. But uncertainty about other economic policies—notably tariffs—may be curbing hiring more than monetary policy.

Financial conditions remain accommodative, as evidenced by the record stock market (apart from a hiccup this past week), along with credit markets that are eagerly absorbing record corporate borrowing, including to fund multibillion-dollar artificial-intelligence investments. That belies assertions of too-tight Fed policy.

Among alternative data sources (not to be confused with "alternative facts"), the Chicago Fed estimated last month's unemployment rate at 4.36%, almost unchanged from its September estimate of 4.35%. The BLS put the August jobless rate at 4.3%, rounded to a single decimal place.

ADP's measure of private-only payrolls posted a larger-than-expected increase of 42,000 last month after September's revised dip of 29,000. The previously maligned ADP gauge has confirmed the plateauing of payrolls outside the government sector. Revelio Labs, another private data tracker, estimated that overall payrolls dipped by 9,100 in the latest month, reflecting a 22,200 decline in government employment.

Similarly, the Bank of America Institute found no further slowdown in employment in October, based on its tracking of internal deposit flows. Payrolls were up 0.5% from a year earlier, unchanged from September. The number of households receiving unemployment benefits rose 10% in October from a year earlier, the same as the preceding month.

While the BLS isn't reporting weekly unemployment claims during the shutdown, underlying data from the states indicate that claims remain low, according to a client note from BCA. The last BLS report showed 218,000 claims filed in the week ended on Sept. 20.

But those numbers were overshadowed by the headlines this past week from Challenger, Gray & Christmas that layoff announcements surged last month to a 22-year high of 153,000. Technology saw 33,000 layoff announcements, bringing the year-to-date total to 141,000, up 17% from the year-earlier period. As noted, those previously announced layoffs haven't shown up in the jobless claims.

A less-acknowledged factor in this year's slowdown in payroll growth has been uncertainty in economic policy, according to John E. Silvia, who heads Dynamic Economic Strategy after retiring as chief economist for Wells Fargo.

An index tracking economic policy uncertainty developed by economists Scott R. Baker, Nick Bloom, and Steven J. Davis has nearly tripled since the end of 2024, although it has receded sharply from its early April peak just after "Liberation Day," when a slew of draconian tariffs were announced.

As an example, Silvia points to a comment contained in the October ISM report released this past week: "Business continues to remain difficult, as customers are canceling and reducing orders due to uncertainty in the global economic environment and regarding the ever-changing tariff landscape."

On that score, the Supreme Court heard oral arguments on the use of the International Economic Powers Act by the president to impose tariffs. Polymarket betting odds that the administration would prevail took a sharp dip, from about 40% prior to the hearing this past Wednesday to 29% on Friday. Even if it loses, the administration is expected to find alternative means to impose tariffs. So, the uncertainty is likely to persist.

Meanwhile, consumers surveyed by the University of Michigan were glum. The latest UMich sentiment gauge slumped 3.3 percentage points to 59.3%, the lowest reading since June 2022, depressed by worries about potential negative economic consequences from the ongoing shutdown.

Yet investors seem unperturbed by the resulting absence of government data, wrote John Higgins, chief markets economist of Capital Economics, in a client note on Friday. While volatility measures in the equity and bond markets ticked up in recent days, coincident with the selloff in frothy AI-related megacaps, they haven't moved much on balance since the Oct. 1 shutdown start and remain subdued.

The aforementioned alternative data "have not rung any alarm bells," while so far this corporate earnings season, 85% of S&P 500 companies have beat estimates, Higgins wrote. The longer the government shutdown drags on, the greater the chance the economy takes a hit, he said. Polymarket bettors on Friday were putting a 42% probability on an end by Nov. 15 and a 93% chance on a resolution by Nov. 30.

If so, we should have a clearer view sometime next month. But for now, no official news on the economy seems mostly OK news. B

The Allure of Mortgage Funds: 7.6%

BY IAN SALISBURY

It isn't easy to find bargains in the bond world right now. Funds that target mortgage-backed securities are one way to snag a little extra yield, without adding a ton of risk.

After years of struggles, bonds are delivering solid returns—the **iShares Core U.S. Aggregate Bond** exchange-traded fund has returned 6.8% in 2025, on track for its best showing since 2020. But as with the stock market, many bonds are richly priced. Both investment-grade and corporate bonds are trading at historically tight spreads, meaning they don't offer much yield above what investors could earn in Treasury bonds.

Meanwhile, mortgage-backed securities, which make up about 20% of the U.S. bond market, boast competitive yields and essentially zero credit risk. These securities, which bundle residential mortgages, may evoke memories of the 2008-09 financial crisis. Today, however, the vast majority are so-called agency bonds, backed by a government-sponsored entity like Fannie Mae or Freddie Mac. From a practical perspective, that means they offer a credit profile similar to Treasuries.

The mortgage sector is having a strong year. The **iShares MBS** ETF, which yields 4.2%, has delivered a 7.6% total return, edging out the rest of the bond market. MBS spreads—the premiums mortgage bonds pay over Treasuries—have narrowed, thanks to that strong performance. But the MBS still yield about one percentage point more than Treasuries with similar durations, in line with their historical average.

Considering corporate bond spreads, that makes MBS comparatively attractive, according to Pimco managing director Mike Cudzil. "There's still plenty of decent value there," he says. "And there's still room for agency mortgages to outperform going forward." The firm's flagship **Pimco Total Return** fund has 33% of its portfolio invested in agency mortgages, compared with about 25% for its benchmark.

The MBS opportunity is a result of recent bond market dynamics. When Covid hit in 2020, the Federal Reserve slashed interest rates and began buying billions of mortgage bonds, a move that shored up MBS prices and held down yields.

When inflation spiked two years later, the central bank reversed course, hiking rates and halting bond purchases. That served up a double whammy to the MBS market. Not only was the Fed no longer a buyer, but major U.S. banks, which had soaked up billions of MBS each quarter, were caught off guard and also retreated from the market. Mortgage spreads jumped from around a quarter percentage point in early 2021 to two percentage points two years later, according to Bloomberg data.

In recent quarters, opportunistic mutual funds and pension funds have been gobbling up excess supply. Meanwhile, banks—which like mortgage-backed bonds because of their favorable capital treatment—are slowly coming back. Bank MBS holdings increased 2.4% year over year in the first quarter, according to Ginnie Mae's most recent market report. It's a trend that should continue thanks to a steepening yield curve, which makes holding MBS more attractive to banks, says Walt Schmidt, FHN Financial's senior vice president of mortgage strategies.

While demand for mortgage-backed securities grows, supply is expected to remain relatively tight. Issuers sold $1.3 trillion of mortgage bonds in the first nine months of 2025, according to Sifma, a trade group. That is on track to easily surpass 2024's $1.6 trillion, but nowhere near the $4.6 trillion issued in 2021. One big reason: With 30-year mortgage rates stuck above 6%, few homeowners are willing to sell or refinance. "If the housing market were going gangbusters, you would see more supply, that's just not the case right now," says Jake Remley, co-manager of the **Harbor Disciplined Bond** ETF, which is also overweight mortgage bonds. B

Scoreboard: A Tech Tumble

Stocks sold off on AI worries, tariff uncertainties, and layoff data. The S&P fell 1.5% and science and tech funds 3.28% through Thursday. Latin American funds rose as peso pressures in Argentina eased.

INCOME INVESTING

Why the Kimberly Deal for Kenvue Worries Investors

BY AL ROOT

It's a story as old as time. Two Dividend Aristocrats meet, fall in love, and merge as proud income investors look on, hoping for a growing pool of payouts. But the tie-up of Huggies maker **Kimberly-Clark** with Band-Aid maker **Kenvue** isn't one of those stories.

On the surface, the merger seems appealing, allowing Kimberly-Clark to expand from diapers and Kleenex into consumer health products, such as Tylenol and plastic bandages. Kimberly-Clark CEO Mike Hsu hopes to squeeze $2.1 billion in annual synergies from the deal, leaving combined earnings before interest, taxes, depreciation, and amortization, or Ebitda, at $9 billion, up from $6.9 billion as stand-alone entities.

More Ebitda means more dividends. Both companies have stellar track records of cash returns: Kimberly-Clark and Kenvue are two of 69 S&P 500 Dividend Aristocrats, companies that have raised payouts for at least 25 consecutive years.

On the postdeal conference call, Hsu said, "Our lean operating mind-set will drive significant cost synergies, unlocking significant capacity to invest back into the business and create significant shareholder value."

The market, however, took a different view. While Kenvue stock rose 12.3% after the deal was announced on Monday, shares of Kimberly-Clark fell 14.6%, leaving the combined enterprise value of both companies at $79 billion, down $2 billion from Friday. The market's initial opinion was that the two companies were worth less as one.

Part of that may be price. Shareholders of Kenvue, which generates about $15 billion in annual sales and $3.4 of Ebitda, will get $3.50 per share in cash and 0.14625 share of Kimberly-Clark, which generates about $18 billion in annual sales and $3.5 billion in Ebitda. The deal valued Kenvue at about $49 billion, more than 14 times estimated 2025 Ebitda, up from closer to 10 times before the announcement.

Wall Street is skeptical. A more positive analyst, Deutsche Bank's Steve Power, says the combo "is not without strategic logic," offering Kimberly-Clark enhanced scale and growth opportunities, though he rates both stocks Hold. Citigroup analyst Filippo Falorni, meanwhile, is concerned with "the challenges of Kenuvue businesses requiring a large turnaround." He rates Kenvue shares Hold, Kimberly shares Sell.

Falorni has a point. Kenvue stock hasn't been a strong performer. Coming into Monday trading, shares were down 33% in 2025, and net income generated over the past 12 months didn't quite cover the dividend. What's more, the company is facing hard-to-quantify liabilities from new Tylenol litigation after Health and Human Services Secretary Robert F. Kennedy Jr. linked the medication to autism in children, something Kenvue believes has no basis in science.

That could pose a dividend problem. Kenvue's 5.8% pre-announcement yield was second-highest among S&P 500 Dividend Aristocrats. The average yield for dividend-paying stocks in the S&P 500 is 2.3%; for Dividend Aristocrats, 2.7%.

Kimberly's shares yielded a rich 4.2% before the announcement. Net income coverage was one reason; it paid out more than 80% of net income over the past 12 months as dividends, well above the S&P Aristocrats average of 65%. While the companies look like they can continue to pay dividends, any hiccup could result in fewer Dividend Aristocrats in the future.

Shareholders need to approve the deal. Kimberly stock and cash are worth about $18.24 to Kenvue shareholders, and Kenvue stock is at $16.46, 10% below the deal value. Some gap is normal, but when the spread is wide, it signals angst, says RBC analyst Nick Modi. It should. B

TECH TRADER

Two days after Palantir's report, digital ad platform AppLovin blew away Wall Street estimates with sales growth of 60% and a 75% margin.

Palantir's CEO Says His Earnings Were the Best Ever. Not Quite.

BY ADAM LEVINE

During **Palantir Technologies**' third-quarter earnings call this past week, CEO Alex Karp began his presentation with a characteristically bold claim. "These are arguably the best results that any software company has ever delivered," he said. "And it's not so hyperbolic."

Indeed, Palantir's results were impressive, whether compared with other companies or its own history of growth. But was it the best quarter ever for a software company? And how would we even measure that?

Venture capitalists have long loved investing in software companies because they combine the best of both worlds—sales growth and cash flow.

Those investors like to talk about the Rule of 40, the idea that sales growth plus profit margin should be over 40%—and the more the better. The Rule of 40 captures both sides of what investors like about software stocks in a single metric. And Karp frequently uses the yardstick when discussing Palantir's results.

Sure enough, Palantir's third quarter shined on a Rule of 40 basis. Its 63% revenue growth was accompanied by a 42% free cash flow margin for a Rule of 40 score of 105. That edged out the company's 101 score from the previous quarter.

It's outstanding, but it isn't the best quarterly report ever. In fact, it wasn't even the best over the past week. Here are a few quarters in software history that outrank Palantir's latest results:

Zoom Communications, 2020-21

I understand why Karp left out **Zoom Communications**' performance during the early quarters of the Covid-19 lockdown, because, frankly, I had forgotten about them as well. When hundreds of millions of people began using videoconferencing every day in 2020, Zoom sales boomed. Revenue growth averaged 363% over the three quarters from May 2020 to January 2021. The company converted 49% of sales to free cash flow over that period, for an average Rule of 40 score of 413.

All told, Zoom had eight quarters with scores above 100, and three over 400.

In the end, Zoom didn't have much of a moat, and **Microsoft** and Google bundled competing products with their productivity suites, cutting off the company's oxygen.

Since Zoom reported its peak Rule of 40 quarter in November 2020, the stock's value has dropped 83%, a period in which the S&P 500 returned 100%.

Other Pandemic Outliers

Several other pandemic-era quarters also bested Palantir's latest results. In its March 2021 quarter, business software company **Atlassian** grew sales 38%, with a whopping 70% free cash flow margin. At the time, company executives warned investors not to get used to those kinds of numbers, and indeed they were right.

Since those results, Atlassian stock has lost 36% versus a total return of 74% for the S&P 500.

Pandemic trends also drove **Shopify** to some of the best quarterly performances on record. During the first full quarter of lockdown in the spring of 2020, Shopify posted a 104% growth rate coupled with a 21% free cash flow margin. Shopify hasn't topped those numbers since, but it has averaged a 50 Rule of 40 score since.

It's another reminder that one quarter doesn't make a stock. Shopify's total annualized return since it reported its spring 2020 quarter is 10.4%, versus 16.7% for the S&P 500 index.

AppLovin, Nov. 5, 2025

By the Rule of 40 measure, Palantir's third quarter wasn't even the best software performance of the past week. On Wednesday afternoon, digital ad platform **AppLovin** blew away already-high expectations with third-quarter sales growth of 68% on top of a 75% free cash flow margin for a 143 score, topping its 138 in the second quarter.

AppLovin CEO Adam Foroughi was rather muted in his characterization of the results, calling it "another very good quarter."

Microsoft, Jan. 18, 1996

In the quarter that ended in December 1995, Microsoft grew sales 48% to $2.2 billion ($4.2 billion in today's dollars), thanks to the release of Windows 95. Some 60% of those dollars turned into free cash flow. It's a particularly remarkable feat given that Microsoft was already a mature company in 1995, larger than any of the others mentioned in this column.

Since Microsoft reported that December quarter, the stock's total return has been 18.2% a year, versus 10.4% for the S&P 500.

So, what does this all mean for Palantir? For one thing, it has a very effective CEO who is unfiltered—and prone to bouts of hyperbole. That's worth keeping in mind as Palantir makes its pitch for changing the world.

And yet, there's reason to think Palantir *is* different, even when compared with some of the stellar companies described above. Palantir has built a base of customers that is unlikely to dry up soon. Its strength has long been in government contracts, and those sales continue to grow quickly.

Palantir's solid base is being supercharged by growth from U.S. commercial customers seeking its artificial-intelligence-driven services. U.S. enterprises made up 34% of the company's third-quarter revenue, up from 25% the year before. Palantir still has a long runway in this new commercial market.

The company will need that momentum to continue if it hopes to reprise its latest quarter. B

David Paul Morris/Bloomberg

"These are arguably the best results that any software company has ever delivered," Palantir CEO Alex Karp said of his company's latest results. "And it's not so hyperbolic." We put his claim to the test.

Q&A

An Interview With Sonu Kalra
Manager, Fidelity Blue Chip Growth Fund

Nvidia, Meta, SharkNinja? Why All Are Winners.

BY RESHMA KAPADIA

Sonu Kalra has managed the **Fidelity Blue Chip Growth** fund since 2009. Today, the $88 billion fund is filled with the bull market's winners, including Magnificent Seven stocks such as **Amazon.com**, **Alphabet**, **Meta Platforms**, **Microsoft**, and **Nvidia**. Although Kalra is constantly on the lookout for developments that could interrupt the growth of artificial intelligence, which has propelled many of these companies and their shares, he believes that it's early days for the technology, and the stocks have much further to run.

Kalra often scouts for investment ideas and battle-tests them by monitoring the habits of his teenage children. "I'm a big believer that the future is being shaped by younger consumers who are early adopters of technology and trends that can drive sustained growth," he says. The strategy has enabled Kalra to spot companies with the potential to become much bigger, often by expanding into adjacent markets. He likes to invest in companies as they begin to show improving returns on equity and invested capital.

Fidelity Blue Chip Growth has benefited from this approach; it returned more than 18%, on average, over the past 15 years, outperforming 96% of its peers, according to Morningstar.

Barron's spoke with Kalra in early October and again via email at the end of the month about ChatGPT's "iPhone" moment, Nvidia's winning streak, Amazon's e-commerce opportunities, and more. An edited version of these conversations follows.

***Barron's*: Many investors, like you, have been captivated by AI-related stocks, although there are now concerns about the amount of AI spending. How do you envision the technology's trajectory?**

Sonu Kalra: AI is the fourth tech wave I have seen in my 25-plus-year career: There was the internet in the late 1990s, the smartphone in the 2000s with the iPhone's launch in 2007, and then cloud infrastructure in the 2010s. This latest wave, generative AI, really started with ChatGPT's launch in November 2022. That is when AI came to the masses and had its iPhone moment.

I think of generative AI as converting investment dollars and energy into intelligence. The goal is artificial general intelligence. There are about 100 million knowledge workers in the U.S. and about one billion globally. If you assign some sort of value to each worker—let's say $100,000 to make the math simple—and you believe that AI can drive 10% productivity, that implies $1 trillion of value in the U.S. and $10 trillion globally. That is why I'm a believer.

What parallels, if any, do you see to the dot-com bubble of the late 1990s?

In the late 1990s and early 2000s, dot-com-related stocks went through a correction and digestion phase. But in the next 20 years, the internet became embedded in everything we do, creating value over time. That is the road map I'm using to think about generative AI.

I am a believer in [futurist Roy] Amara's Law: We tend to overestimate the impact of technologies in the short term but underestimate them in the long term. I use Netscape, the internet-browser company, as an example. It went public in 1995 and brought the internet to the masses—similar to ChatGPT. That was the starting line [of the internet cycle].

Back then, it was difficult to see the second- and third-order effects of the internet—that the value of taxi medallions would drop 90%, for instance, or that we would feel comfortable sleeping in strangers' homes. But that is what happened with the rise of **Airbnb** and **Uber**.

Some of today's concerns center on circular funding, or companies funding one another to grow. Does this remind you of the 1990s?

Yeah. We have to understand how the dollars are flowing from one entity to another. It doesn't mean these [funding] deals will end badly, but it is something you have to watch. The market will determine whether the investments made by the biggest tech companies are justified, either by the revenue generated or the productivity that results. One way or another, we need to see some tangible return on that investment. That is the concern in the marketplace, and it is healthy.

Which companies are winning so far?

Right now, I would put Nvidia at the top of the list. It is the leader in providing the infrastructure, or the picks and shovels for the AI buildout. In terms of use cases, Meta Platforms has been vocal about the benefits of AI in improving the efficiency of its ad platform and driving engagement. Meta's revenue growth has accelerated in the past couple of years.

Alphabet has the largest employee base of AI researchers. A lot of technologies were invented at Google. The majority of its revenue has come from search, and it is trying to bridge the gap to the world of generative AI. Alphabet has its own AI models. Gemini is most prominent, but it also has other AI models for video.

What would make you reassess the prospects for these and other AI-related companies?

Market-share declines would be a warning sign. These companies are also investing a lot not just in capex but also in hiring, so we need to see profitability come through. I consider them well positioned. One of their advantages is incumbency. A large installed base of users and data is the currency needed for success in generative AI, which is different from previous tech cycles.

Nvidia has been affected by U.S. restrictions on China's access to advanced technology. Do you see other geopolitical risks?

For Nvidia, it can't get worse: its sales to China went to zero in the past six to 12 months. As an investor, I have already taken the pain. If the administration can find a way that enables Nvidia to have a healthy business in China, that would be great. But it's a "nice to have," not a "must have."

Nvidia has been investing in several "neocloud" companies such as CoreWeave, which in turn have been buying Nvidia chips. Is this a smart approach?

These specialized cloud providers are focused on building AI infrastructure and providing cloud-based AI services. Google, Amazon, and other tech companies have chips that compete with Nvidia's, so Nvidia is making its products available through as many distributors as possible. But we need to make sure the neocloud companies are generating the revenue they expected.

Neocloud companies spend billions to build out data centers, and then the customers come in. But neoclouds get paid monthly over several years. Cash flow is positive over the life of the contract, but it takes time to reach the break-even point.

What is your framework for assessing Nvidia's valuation?

Nvidia is the leading semiconductor and infrastructure provider for training large language models and inferencing. It offers a complete stack of solutions including chips, systems, software, and networking, along with best-in-class performance at the leading edge. We are still early in the transition from data centers running on traditional CPU [central processing unit]–based architecture to an AI-based architecture running on GPUs [graphics processing units].

Nvidia's stock is trading at less than 30 times 2026 consensus estimated earnings per share, below the 35 times at which it traded in late 2022 when ChatGPT was launched. The company has grown revenue more than 60% in 2025.

What are the potential constraints on AI?

Electricity can be a constraint to growth. There have been a lot of deals around power and access to power over the past five months. I watch the power announcements being made, how long it takes to bring the power online, and whether it is enough to power these data centers. A lot of power investments need to take place.

What I am monitoring most closely are use cases. I want to see this technology become embedded in our everyday lives. OpenAI has recently signed partnerships with applications such as **Expedia** and **Booking Holdings** for travel-related tasks; **Zillow** for searching real estate listings; Canva and **Figma** for creating content and collaboration; **Walmart**, **Shopify**, and **Etsy** for shopping-related tasks. It has also announced it will be integrating **DoorDash**, **Uber**, **PayPal**, and OpenTable in the future.

But we want to see if AI can complete tasks on our behalf. Coding is a successful use case. AI could also be used to fundamentally transform customer service. As technology and AI mature, the customer experience may improve, with AI delivering faster and more accurate resolutions while driving down operational costs.

What is one of your biggest holdings that has momentum outside of the AI theme?

Amazon is still the leader in e-commerce, and e-commerce is still less than 20% of U.S. retail sales. Incremental penetration of the market provides a secular tailwind for Amazon. Half of every incremental retail dollar is now going into e-commerce.

Amazon trades at a discount to retailing peers Walmart and **Costco**; it has a price/earnings ratio of 32 times 2026 consensus earnings-per-share estimates, compared with Costco at 42 times and Walmart at 35 times. Amazon has been growing revenue by 12% in 2025, compared with 8% revenue growth for Costco and 4% for Walmart.

Where are you finding innovation outside of tech?

SharkNinja is a home-appliance company that has been hurt by tariff concerns because much of its supply chain is in China. But it is bringing innovation into a category that hasn't seen much of it. People may know about the SharkNinja blender or vacuums. The company is introducing new products such as the Creamy Ice Cream machine.

The company is good at using social media and influencers to promote its products. It just entered the outdoor-grill and beauty and skin-care categories. By empowering users to craft custom recipes from low-calorie treats to high-protein ice cream, SharkNinja is turning dessert into a personalized wellness trend.

It is following a three-pronged growth strategy: gaining share in existing categories such as the kitchen; expanding into new categories with products such as its Woodfire outdoor grill and beauty and skin care with its LED mask and styler; and expanding internationally, as only 30% of sales come from outside the U.S. The stock currently trades for 14 times 2026 consensus earnings estimates. The company has been growing revenue and earnings by 15% a year.

Thanks, Sonu. B

THE TRADER

Big Tech Sank the Market. What to Buy Instead.

BY JACOB SONENSHINE

The bigger they come, the harder they fall—and Big Tech fell hard this past week.

There was no place to hide. **Microsoft** fell 4.1%. **Tesla** dropped 5.9%. **Broadcom** slid 5.5%. **Nvidia** and **Oracle** slumped 7.1% and 8.9%, respectively. **Palantir Technologies** tumbled 11%. All of them fell despite the absence of any news that might be considered "bad."

The result was as you might expect. The Dow Jones Industrial Average declined 1.2%, and the S&P 500 index fell 1.6%, suffering their worst declines since the week ended on Oct. 10. The Nasdaq Composite dropped 3%, its worst week since the one ended on April 4, which included President Donald Trump's "Liberation Day." It was ugly.

The catalyst, if you believe the folks who always have to have a reason for the market's decline, was data from Challenger, Gray & Christmas showing that layoffs spiked in October. With the October payrolls report, which should have been released on Friday, delayed, it was one of the few data points that traders had to act on.

Maybe it was an excuse to take profits. Maybe investors realized Palantir stock was too expensive at 248 times 12-month forward earnings, despite what CEO Alex Karp described as "arguably the best results that any software company has ever delivered"—they weren't—and maybe the same went for other tech companies.

Enter the rest of the market. The **Invesco S&P 500 Equal Weight** exchange-traded fund dropped just 0.8% this past week, a sign that the typical stock fared far better than the index's larger ones. That may simply be because the nontech stocks in the index have less to lose. The equal-weight version of the index has underperformed the cap-weighted one by 7.4 percentage points in 2025 and is cheaper: It trades at 16.7 times analyst's aggregate expected earnings for the coming 12 months, 26% less than the S&P 500's 22.6, a steeper discount than the 17% five-year average.

Earnings growth isn't just for tech companies anymore, either. The aggregate analyst sales growth expectation for the equal-weighted S&P 500 is 5% for 2026, according to FactSet, which should be enough to generate earnings growth of 11%, not far below the 13% for the standard index. With the economy still growing despite the government shutdown—and odds suggesting that the Federal Reserve will continue to cut interest rates, especially in the face of weak jobs data—it should be enough to keep pushing earnings higher.

Could financial stocks be the new tech? The **Financial Select Sector SPDR** ETF was little changed this past week, suggesting that economic worries aren't at the forefront of the selling. It trades at just under 16 times earnings, a sizable discount to the overall market, while margins are expected to rise by 1.5 percentage points. There are multiple tailwinds: Banks can benefit from loan demand, more mergers and acquisitions, and higher trading revenue. Money managers can benefit from growth in assets under management. Insurers could benefit from mild job growth. They can all see higher margins as they replace some costs with artificial intelligence.

So, let the tech selloff continue. It's time for everything else to shine for a while.

11 Staples Stocks Worth a Look

For a sector known for safety, consumer staples have been living dangerously. Investors should recognize that not all of the stocks are created equal.

It has been a tough year for the sector. The **Vanguard Consumer Staples** ETF has dropped 1.1% this year, while most other S&P 500 sectors are in the green. Investors have mostly stayed away from defensive sectors, instead pouring money into tech stocks and sectors that benefit from a strong economy, including financials.

But staples have fared far worse than other defensive sectors. In the red for the year are **PepsiCo**, **Hershey**, **Mondelez International**, **General Mills**, **Keurig Dr Pepper**, **Kraft Heinz**, **Conagra Brands**, **McCormick**, **Target**, **Procter & Gamble**, and **Colgate-Palmolive**.

If investors had forgotten the hole the sector is in, they got a reminder when **Kimberly-Clark** announced this past Monday that it planned to pay more than $40 billion for Tylenol maker **Kenvue**. The market hated the deal. Kimberly's stock fell 15% on the day of the news, adding to the 25% drop it had suffered over the previous five years.

The sector's decline has made staples a good deal cheaper than they were before. The Vanguard ETF trades at 20 times 12-month forward earnings, down from a 2025 peak of 21 times and below the S&P 500's 23 times. Many are cheap for a reason, but some are truly bargains, especially those with improving fundamentals. Companies that have had their earnings estimates rise over the course of 2025 and operate in businesses that aren't in decline include **Coca-Cola**, **Monster Beverage**, stevia maker **Ingredion**, egg producer **Cal-Maine Foods**, **Costco Wholesale**, **Kroger**, **Casey's General Stores**, **Instacart**, **WD-40**, and **Altria Group**.

They also include Marlboro maker **Philip Morris International**, which is transitioning from cigarettes to smokeless products. It now trades at just 18 times earnings, a 21% discount to the S&P 500—below its three-year average discount of 16%. The discount has grown despite analysts lifting 2025 earnings estimates by 5.3% this year, as the company has beaten earnings expectations during the past four quarters.

Smoke-free sales, which hit $4.4 billion in the third quarter, grew 17.7% year over year as people adopted the new products. That outpaces the 4.3% growth, to $6.4 billion, in the combustible business, as higher prices offset declines in the number of cigarettes sold. Smoke-free products also earn relatively high profits, helping the company's operating margin to rise just over a percent-

age point, while earnings per share rose 17%, higher than the average staple and even aggregate S&P 500 earnings growth.

That's the kind of staple to believe in.

Starbucks Makes a China Move

Change keeps coming to **Starbucks**, and we're not talking about the happy messages that workers are now required to write on the cups even as some go on strike.

The coffee vendor announced this past Monday that it would sell a 60% stake in its China operation to Chinese asset manager Boyu Capital at a $4 billion enterprise value, while creating a joint venture that includes licensing payments to Starbucks. It touted Boyu's "depth of understanding of Chinese consumers" as the rationale for making the deal. Joining with a Chinese partner or creating a separately run Chinese company has been a way for U.S. brands to avoid being targeted by that government while focusing on their other businesses.

Whatever the rationale, the JV seems to make sense for Starbucks. "We view the transaction as an incremental positive as Starbucks de-risks from China and sharpens focus on core U.S. market," writes BMO Capital analyst Andrew Strelzik, who has an Outperform rating and a $115 price target on the stock, which recently traded at $85.

The strategy has been in play before. In 2017, **McDonald's** sold an 80% stake in its Chinese business to **Carlyle Group** and Citic Group, a state-owned conglomerate. (McDonald's bought Carlyle's stake in 2023.) In 2015, **Yum! Brands**, the owner of Pizza Hut and KFC, announced a spinoff of **Yum China**. While the stock has underperformed the S&P 500 since the spin was announced, its 183% rise outpaced the 125% average from large-cap fast-food stocks.

For Starbucks, the initial impact of the deal should be minimal. Evercore ISI analyst David Palmer estimates the deal will shed less than $100 million of operating profit, but that it would earn a lot of that back by using the $2 billion in transaction proceeds to pay down debt coming due over the next two years. The deal should also boost Starbucks in China, he says. Boyu plans to increase store growth back to a double-digit percentage rate, up from 5% in 2025. Palmer has an Outperform rating and a $105 price target on the stock.

Starbucks CEO Brian Niccol, who had a long and successful run at **Chipotle Mexican Grill**, can focus on restoring growth in the U.S. He and his team are cutting back on menu items to create a simplified customer experience, redesigning stores, creating more-comfortable seating, and rewiring the mobile app to complete orders faster. Management is also investing in new training and tools for employees to position them to move orders into customers' hands faster.

Analysts now forecast annual same-store-sales growth of over 3% in 2026 and 2027, up from no growth expected this year, according to FactSet. North America, which accounts for three-quarters of Starbucks' revenue, would drive the growth, with analysts forecasting a near 3.5% annual increase. Add in some growth in stores—they should rise to nearly 44,000 in 2027, according to FactSet, from just over 41,000 this year—and analysts see sales growing 5% annually to about $41.6 billion in 2027.

Starbucks also plans to cut general and administrative expenses by a bit more than $1 million through 2027, raising operating profit margins and boosting earnings by 20% annually, to $3.17 a share, in 2027.

Based simply on those numbers, Starbucks stock could hit nearly $105 by the end of 2026, a 26% rise. But if it can demonstrate it's on track to reach those profit expectations, its valuation could get back to its 2025 high, putting the stock at $111.

Wake up and smell that coffee. B

INTERNATIONAL TRADER

Dutch Auto Chip Maker Navigates the Trade War

BY CRAIG MELLOW

Breaking up with China is hard to do—especially for Europe, caught in the U.S.-China trade war crossfire. Messing with small bits of a supply chain can cause big global headaches. Those are lessons from the unfolding drama around Nexperia, a Dutch producer of humble yet essential automotive microchips that was acquired in 2017 by state-controlled Chinese conglomerate **Wingtech Technology**.

Nexperia's plant in Nijmegen cranked out billions of components necessary to draw power from your car battery or turn your headlights on. It shipped them to China, where Wingtech tested, packaged, and re-exported them. "Nexperia makes the types of chips that are fundamental to virtually every modern vehicle," says Nick Paul, general manager for United Kingdom–based supply chain specialist IC Blue "Substitution in automotive is difficult."

Trouble started in December. The Biden administration, in its final tech war fusillade, added Wingtech and 139 other Chinese chip-related companies to its "entities list," meaning that any U.S. business would need a special license to deal with them.

President Donald Trump's Commerce Department upped the ante in September, determining that entities restrictions extended to any subsidiaries, e.g., Nexperia. On Oct. 12, the Dutch government invoked its 1952 Availability of Goods Act to assume control over Nexperia management.

"The Americans forced one of the most entrepreneurial countries on Earth into an expropriation lite," says Dimitar Lilkov, a senior research officer at the Wilfried Martens Centre for European Studies.

Beijing's first response was to shut down the Nexperia trade. Auto makers' reaction was fast and global. **Honda Motor** suspended production at a Mexican assembly line. **Volkswagen** said it could be a week away from its own shutdowns.

China started sending more mixed signals after leader Xi Jinping's sit-down with Trump on Oct. 30. "We will comprehensively consider the actual situation of the enterprise and exempt eligible exports," its Commerce Ministry announced. "[China] has been engaging with EU companies to restore the partial flow of chips," a European Union spokesperson noted on Nov. 4. "This avoids a worst-case scenario."

So, China may not be ready to break up with the West yet, either. This might not be the last test where Beijing leans on its strength in work-a-day industrial semiconductors while Silicon Valley is entranced by whiz-bang artificial-intelligence-driven breakthroughs, though. "This dispute highlights that mature-node components are in fact strategically critical, and China remains central to global production," Paul says.

The good news for Europe is that it's also host to a brace of mature-node chip powers whose stocks have languished while U.S. tech sprinted ahead. The Continent is particularly strong in automotive chips, which could grab more investor attention if the AI bubble ever pops. Germany's **Infineon Technologies** is the global leader in that category, followed by Dutch-Swiss **STMicroelectronics**.

"These companies make the most innovative chips for electric vehicles," says Javier Correonero, an analyst covering European semiconductors at Morningstar. "That's just not as growthy as AI." Rounding out his list of potential European tech sleepers are two Dutch semiconductor equipment manufacturers: **ASM International** and **BE Semiconductor**.

It isn't only Washington nudging Europe out of China's embrace. Fearful of more Nexperias in the emerging domains of EVs and green technology, EU President Ursula von der Leyen ushered in a "de-risking" strategy for relations with the No. 2 economy. It would help if the Atlantic allies could work together, Lilkov argues.

"The Americans are smashing through their own interests and leaving us with a bloody nose," he says. B

THE STRIKING PRICE

When stock prices decline, it's often very profitable to sell put options on stocks you're willing to own for the long term. Here's how the trade works.

Fear Is Spreading in the Market. Profit From It.

BY STEVEN M. SEARS

The most powerful mind-set in the financial markets is understanding that time and volatility are allies. If you can condition yourself to embrace that fact, you can profit from calamity and good fortune with equal aplomb.

The stock market, as everyone knows, is currently trading close to record levels. Various measures of valuation levels are historically elevated, though the implied volatility of the S&P 500 index suggests that investors are less worried than market pundits.

All markets and stocks ultimately decline. Such is the nature of markets. But it's important to remember that stock markets, over long periods, rise—although not in a straight line. The growth of stock prices—and corporate earnings—is a powerful phenomenon.

Yet those facts are too often overshadowed by the dour predictions of the commentariat. The stock market, for instance, didn't decline in August, nor September, nor October, despite many predictions that it would. Seasonally weak months were made strong by generally strong economic data. Lower interest rates also helped.

The often-wrong, never-in-doubt crowd is back. They are still warning that doom may soon erupt from the bid-and-ask spreads that are the fabric of the stock and options markets.

Hence, it's important to think about how you might handle such an occurrence. The answer is simple: by embracing volatility and time.

When stock prices decline, implied volatility—which is the essence of options prices—increases, often more than merited because investors panic.

When this happens, it's often very profitable to sell put options to panicked stock investors. Puts, which give holders the right to sell an underlying asset at a designated price and time, increase in value when stock prices decline.

Investors tend to pay any price to buy puts to protect their falling stocks. It's irrational but true. This is why so many seasoned investors like to sell puts on stocks that they are willing to own.

If you think stocks will continue to rise through the end of year, despite the dour predictions, consider a strategic approach that essentially pays you to participate in any future stock rallies. A good way to do that is selling puts and buying a call option. (Calls give holders the right to buy an underlying asset at a designated price and time.)

Our strategy takes advantage of this past week's weakness in the stock market, which caused many investors to buy puts to hedge stocks. Fear of stock declines is a key reason why puts are often just a little more expensive than they should be. When a decline actually occurs, puts become even more expensive.

Anyone who wants to profit from those facts can consider a "two by one" strategy, which entails selling two puts and buying one call. The trade generates significant income, while enabling investors to profit from any advances.

While the strategy works on stocks an investor wants to buy at lower prices, it also works with the S&P 500 and other indexes.

With the **SPDR S&P 500** exchange-traded fund around $671, an investor could sell two January $645 puts for about $12.40 and buy one January $700 call for about $8.80. If the ETF is at $730 at expiration, for instance, the call is worth $30. The money received for selling the puts can be kept if the index is above the put strike prices.

The risk is that the stock or ETF price falls far below the put strike price. If that happens, investors must buy the stock or ETF at those put strikes, or readjust the position with some trading.

Of course, risk is a relative term if you heed the advice on time and volatility. B

This table of the most active options this week, as compared to average weekly activity – not just raw volume. The idea is that the unusually heavy trading in these options might be a predictor of corporate activity – takeovers, earnings surprises, earnings pre-announcements, biotech FDA hearings or drug trial result announcements, and so forth. Dividend arbitrage has been eliminated. In short, this list attempts to identify where heavy speculation is taking place. These options are likely to be expensive in comparison to their usual pricing levels. Furthermore, many of these situations may be rumor-driven. Most rumors do not prove to be true, so one should be aware of these increased risks if trading in these names

INSIDE SCOOP

Microsoft President Sells $20 Million in Shares

BY MACKENZIE TATANANNI

Microsoft stock has continued to slide on the heels of its latest quarterly earnings report, and one top executive has sold some shares.

A Securities and Exchange Commission filing shows Vice Chair and President Brad Smith sold 38,500 shares of Microsoft common stock in two separate transactions on Monday, Nov. 3.

The first sale was for 30,411 shares at an average price of $518.49 each, followed by a second of 8,089 shares for $519.21 apiece. In total, these came to nearly $20 million worth of company stock.

Following the transactions, Smith directly owned 461,596.76 shares of Microsoft stock, which was worth more than $237 million based on Tuesday's closing price of $514.33. The amount includes fractional shares.

Microsoft posted fiscal first-quarter earnings at the end of October. While shares remain up 21% this year, they sold off recently on concerns about its artificial-intelligence spending. On Tuesday, the Nasdaq Composite dropped 2%, its worst day in nearly a month.

Microsoft's latest earnings report shows it has doubled down on AI-related spending. Capex reached $34.9 billion in the quarter, exceeding expectations.

On Nov. 3, Microsoft said it planned to invest a total $15.2 billion in the United Arab Emirates by 2029.

"This is part of an ongoing and periodic step to diversify," a Microsoft spokesperson tells *Barron's*. "Brad also donated 10,000 shares to Microsoft's Donor Advised Fund for future philanthropic giving, and that form will be filed shortly." B

Brad Smith sold 38,500 shares of Microsoft common stock in two separate transactions on Nov. 3 for an average price of $518.85 each.

This Hot IPO Stock Has Been Falling. ARK Invest Keeps Buying.

Shares of cryptocurrency exchange **Bullish** soared in its red-hot initial public offering earlier this year. But even as the stock slipped off its highs, Cathie Wood's ARK Invest funds have remained staunch supporters.

Trade disclosures on Oct. 31 show three of ARK's actively managed funds bought Bullish stock. **ARK Innovation** exchange-traded fund (ticker: ARKK) snapped up 72,537 shares, while **ARK Next Generation Internet** ETF (ARKW) and **ARK Fintech Innovation** ETF (ARKF) picked up 21,354 and 11,122 shares, respectively.

The total of 105,013 shares were valued at more than $4.6 million based on a market price of roughly $44 on Oct. 6.

ARK Invest didn't respond to a request for comment.

As of Oct. 3, ARKK owned 1,603,762 shares of Bullish, ARKW 486,954 shares, and ARKF 299,265 shares, according to the firm's website. Bullish comprises roughly 1% of each fund's total holdings.

ARK has been steadily adding to its stake in the Peter Thiel-backed crypto exchange since it made its debut on Aug. 13 at $37, and quickly surging more than 80% before falling back. At the time, ARK purchased around $2.5 million worth of shares across the three ETFs, valued at roughly $172 million. B

Original Filings

MapLight Therapeutics (MPLT)

Novo Holdings A/S disclosed a new position in the biopharmaceutical company of 3,686,622 shares. Novo purchased 952,941 of those shares into the company's initial public offering on Oct. 3 for $17 per share. Following those purchases, Novo owns an 8.4% stake in MapLight Therapeutics' outstanding stock. Shares of MapLight Therapeutics have lost roughly 12.8% of their value in 2025.

Increases in Holdings

Gold Royalty (GROY)

Tether Holdings raised its stake in the gold-focused royalty company to 17,991,198 shares. Tether Holdings did so through the purchase of 9,691,198 Gold Royalty shares from Oct. 17 through Oct. 31 at per share prices ranging from $3.50 to $3.72. Following the latest purchases, Tether Holdings owns a 10.5% stake in Gold Royalty's outstanding stock. Shares of Gold Royalty have surged to gain 173.4% in value in 2025.

Neumora Therapeutics (NMRA)

Arch Venture Partners raised its stake in the clinical-stage biopharmaceutical company to 33,958,967 shares. Arch Venture Partners did so through the purchase of 1,915,700 Neumora Therapeutics shares on Oct. 27 at a price of $2.61 per share. Following the latest purchases, Arch Venture Partners owns a 20.7% stake in Neumora Therapeutics' outstanding stock. Shares of Neumora Therapeutics have gained roughly 33% in value since the beginning of this year.

Decreases in Holdings

Insight Enterprises (NSIT)

ValueAct Capital lowered its stake in the enterprise IT company to 1,666,739 shares. ValueAct did so through the sale of 435,000 Insight Enterprises shares from Oct. 10 through Oct. 28 at per share prices of $105.13 to $109.88. Following the latest sales, ValueAct continues to own 5.3% of Insight Enterprises' outstanding stock. Shares of Insight Enterprises have lost about 36.4% of their value in 2025.

Garrett Motion (GTX)

Oaktree Value Opportunity Fund reduced its stake in the vehicle-parts maker to 25,894,816 shares. Oaktree did so through the sale of 6,000,000 Garrett Motion shares in a block sale to **BofA Securities** for $16.25 per share on Oct. 27. Following the latest sales, Oaktree Value Opportunity Fund continues to own 13.3% of Garrett Motion's outstanding stock. Shares of Garrett Motion have gained roughly 96% in value in 2025.

Rogers (ROG)

Starboard Value lowered its stake in the engineered products company to 1,203,457 shares. Starboard Value did so through the sale of 473,045 Rogers shares from Oct. 24 through Oct. 31 at per share prices ranging from $83.42 to $86.92. Following the latest sales, Starboard Value continues to own 6.7% of Rogers' outstanding stock. Shares of Rogers have lost approximately 13.4% of their value in 2025.

These disclosures are from 13Ds filed with the Securities and Exchange Commission. 13Ds are filed within 10 days of an entity's attaining more than 5% in any class of a company's securities. Subsequent changes in holdings or intentions must be reported in amended filings. This material is from Oct. 30 through Nov. 5, 2025. Source: **VerityData (verityplatform.com)**

How Analysts Size Up Companies

These reports, excerpted and edited by *Barron's*, were issued recently by investment and research firms. The reports are a sampling of analysts' thinking; they should not be considered the views or recommendations of *Barron's*. Some of the reports' issuers have provided, or hope to provide, investment-banking or other services to the companies being analyzed.

Targa Resources · TRGP-NYSE

Buy · $160.46 on Nov. 5
by Seaport Research Partners

Targa Resources reported a solid third-quarter beat driven by volume growth in the gathering & processing segment and also plans to come in at the high end of the previous fiscal-2025 adjusted Ebitda guidance. It also bought back about $156 million of stock during the quarter and announced a 25% dividend increase for 2026; we thus expect investors to view this update positively. On the conference call, we expect the focus to be on: 1) recent trends in Permian volumes and initial outlook for 2026 activity, 2) capex plans for 2026 and subsequent years considering Targa's growth pipeline of projects, and 3) competitive pressures in the Permian basin and updated thoughts on capital allocation. Price target: $193.

Bio-Techne · TECH-Nasdaq

Buy · $61.10 on Nov. 5
by Benchmark Equity Research

Bio-Techne reported below-expected financial results for its first-quarter 2026 (September), including revenue of $286.6 million, down 1% year over year, and flat adjusted earnings of $0.42 versus $0.42 for first-quarter 2025. Our estimates had been revenue of $298 million, a 3% increase, and adjusted earnings per share of $0.46. Company management cited headwinds in its GMP proteins business and funding delays for its emerging biotech customers as reasons for the flat results. Bio-Techne did not provide financial guidance for upcoming quarters but may do so on its conference call. We are maintaining our Buy rating on Bio-Techne shares and $75 price target on the long-term potential of the company's diversified life science product portfolio.

McDonald's · MCD-NYSE

Hold · $304.83 on Nov. 5
by Stifel

McDonald's reported relatively in-line comps, but earnings fell short as heavy marketing investments weighed on flow-through. While U.S. comps were up 2.4% (Stifel 2.5%, Street 2.0%)...transactions remain challenged. While management indicated that its efforts to reset consumers' value perception were moving the needle, a bifurcated consumer base with persistent pressures on lower-income consumers proved to be a considerable offset. The company expects U.S. comps to accelerate in the fourth quarter, driven primarily by lapping last year's food safety incident, as well as support from the November Extra Value Meals promotions. While we are encouraged by the improving comp trends, it's difficult to parse the benefit of easier comparisons from the true impact of the current push to improve consumer value perception, keeping us on the sidelines. Price target: $315.

Docebo · DCBO-Nasdaq

Outperform · $25.62 on Nov. 5
by Oppenheimer

We are initiating coverage of Docebo, a leading provider of learning management systems, with an Outperform rating and $35 price target. Docebo has seen growth outpace the broader LMS market by displacing legacy vendors, moving upmarket, and extending into new markets. We see average revenue per user as a key growth driver with management prioritizing enterprise sales. We also see potential for the push into the public sector to factor more meaningfully after achieving FedRAMP status in April 2025. As the business scales, we are also seeing improved operating leverage....We see attractive risk/reward with shares trading at 2.9 times calendar-year 2026 estimated enterprise value/sales and 15.4 times EV/free cash flow.

Marriott International · MAR-Nasdaq

Neutral · $272.24 on Nov. 5
by Mizuho

Third-quarter upside and relatively conservative fourth-quarter guide is overall neutral/slightly positive, as fourth-quarter weakness was largely baked into the stock, with the third quarter being a surprise positive. The 2026 preliminary outlook reflects a similar growth algo vs. 2025, which we feel is reassuring, given the macro uncertainty. In essence, lodging (and Marriott specifically) is not particularly crowded, and has an easy path to growth next year (which is attractive in the context of broader consumer discretionary). We maintain our Neutral rating and believe the risk/reward is fairly balanced. Price target: $297.

Snowflake · SNOW-NYSE

Outperform · $265.42 on Nov. 5
by Evercore ISI

At Snowflake's annual developer and product conference, the key message was Snowflake's evolution from a "Data Cloud" to an "Enterprise Intelligence Cloud"....Altogether, the event reinforced that Snowflake's future growth will hinge on helping customers build and reason with their data, not just store it....The "top five" product announcements underscored that narrative, including: 1) the general availability launch of Snowflake Intelligence, enabling natural-language access and agentic workflows across structured and unstructured data; 2) expanded Cortex AI capabilities, adding multimodal model support...and tighter model governance; 3) the introduction of Snowflake Notebooks, a native environment for developers to prototype data and AI workflows without leaving the platform; 4) new Native App Framework enhancements, allowing customers and partners to build, distribute, and monetize data-driven apps directly within Snowflake's Marketplace; and 5) deeper integration of unstructured data and vector search, making it easier for enterprises to build retrieval-augmented and AI-powered applications on top of their existing datasets. Price target: $280.

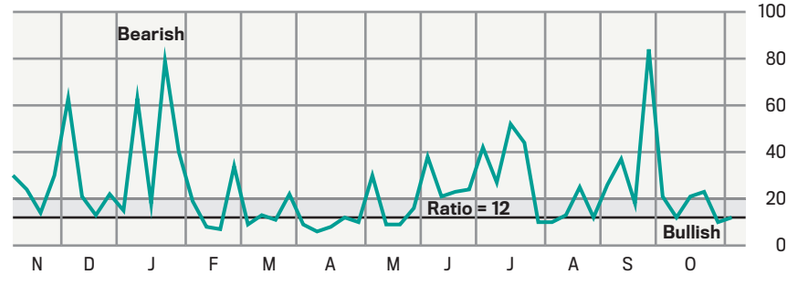
An insider is any officer, director or owner of 10% or more of a class of a company's securities. In most cases, an insider must report any trade to the SEC within two business days. The tables highlight companies that filed with the SEC through last Wednesday. The tables do not include pension-plan or employee stock-option activity, trades by beneficial owners of 10% or more, trades under $2 per share or trades under 100 shares. The "Purchases" column includes only open-market and private purchases; the "Sales" column includes only open-market and private sales, and excludes trades preceded by option exercise in the 12 months prior to the reported event. Source: LSEG Data and Analytics

Insider Transactions Ratio



Ratio of Insiders Sales to Buys. Readings under 12:1 are Bullish. Those over 20:1 are Bearish. The total top 20 sales and buys are 498,168,505 and 43,149,369 respectively; Source: LSEG Data and Analytics

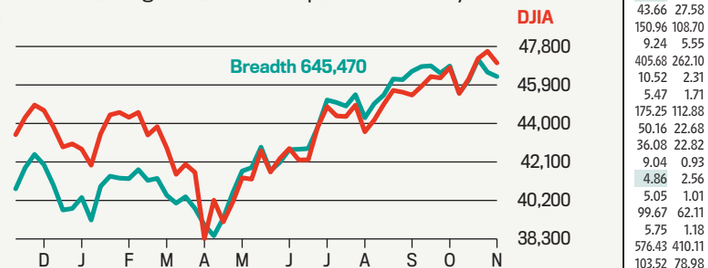
NEW YORK STOCK EXCHANGE COMPOSITE LIST

BARRONS.COM/DATA

NYSE Cumulative Daily Breadth vs DJIA

Everything Falls Apart: NYSE Composite breadth fell for the first time in four weeks. The S&P 500 slid 1.6%, amid signs that the jobs market continued to slow. Losing NYSE stocks outpaced winners by 5 to 4.



In generating this chart, we subtract each day's NYSE composite declines from that day's advances. The resultant total is added to the next day's total, and so on. When all five days' numbers are added together, this produces the weekly figure we plot. Dec. 31, 1985 =1000.

Nasdaq Issues includes stocks traded on the Nasdaq Global Select and Nasdaq Global Market tiers. They are eligible for inclusion on the basis of SEC-approved market value of publicly-held shares, trading volume, price and number of market-makers.

Five-Day Nasdaq Composite

Nice Work: Tesla shareholders approved Musk's $1 trillion pay package. Metsera favored Novo Nordisk's buyout bid over Pfizer's. The Nasdaq Composite Index ended Friday at 23,005– down 3% on the week.

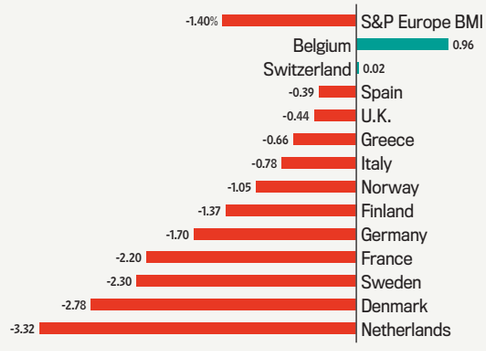
FOREIGN MARKETS

Europe

Continental Comeback: After trailing U.S. stocks for months, European shares may rally in 2026, says J.P. Morgan.



Indexes based on S&P Global Broad Market Indices

Asia

Everywhere: Al shares slid in Asia, too. Japan's Softbank fell 8% Friday. South Korean chipmakers, like SK Hynix, dropped.

MUTUAL FUNDS

DATA PROVIDED BY LIPPER

BARRONS.COM/DATA

About Our Funds
The listings include the top 1250 open-end funds by assets. These funds value their portfolios daily and report net asset values (the dollar amount of their holdings divided by the number of shares outstanding) to the National Association of Securities Dealers. Total returns reflect both price changes and dividends; these figures assume that all distributions are reinvested in the fund. Because Lipper is constantly updating its database, these returns may differ from those previously published or calculated by others. 3 year returns are cumulative. The NAV is the last reported closing price for the week. Footnotes: NA: not available. NE: performance excluded by Lipper editor. NN: fund not tracked. NS: fund not in existence for whole period. e: ex capital gains distributions. f: previous day's quote. n: no front- or back-end sales charge. p: fund assets are used to pay marketing and distribution costs (12b-1 fees). r: fund levies redemption fee or back-end load. s: stock dividend or split of 25% or more. t: fund charges 12b-1 fees (for marketing and distribution) and a back-end load. v: capital-gains distribution may be a return of capital. x: ex cash dividend.

U.S. Dollar Index vs Euro and Yen

Money Back: The U.S. Supreme Court asked sharp questions about President Trump's tariffs. If the federal government is ordered to refund those levies, the $195 billion payment might weigh on the dollar. Measuring the dollar against six currencies, the ICE U.S. Dollar Index slipped 0.25% on the week.

Arms Index

The Arms index, also known as the short term trading index, is a number derived by dividing one quotient into another quotient. The numerator in the index is the number of advancing stocks divided by the number of declining stocks. As of 3/14/11, the denominator in the index is now the composite volume of advancing stocks divided by the composite volume of declining stocks.

Delta Market Sentiment Indicator

The Delta MSI measures the position of a representative set of stocks relative to an intermediate-term moving average crossover (MAC) point. When greater than 50% of the stocks are above this MAC point, the market is bullish. When the indicator is below 50%, the market is bearish and risk is elevated. Manager uses discretion on asset allocation when MSI is at 50% +/- 3%.

OTHER VOICES

The Fed can talk tough, but as long as fiscal pressures dominate, its independence will remain conditional and its 2% goal aspirational.

What's Keeping The Fed From Its 2% Inflation Target

BY DAVID BECKWORTH
The writer is a senior research fellow at the Mercatus Center and host of the Macro Musings *podcast.*

The last mile of a long journey is often the hardest. The Federal Reserve has traveled far in its fight against inflation since it peaked near 9% in 2022. But since the summer of 2023, progress has stalled around 3%. The finish line—that elusive 2% target—remains just out of reach.

This two-year pause in disinflation, coupled with recent interest-rate cuts and the prospect of more to come, has led some to wonder whether the Fed has lost the will to beat back inflation and has quietly resigned itself to a new normal, where 3% is the new 2%. It is more likely, however, that deeper fiscal forces are keeping inflation stubbornly elevated.

Fed officials insist they haven't given up on their 2% target. Fed Chair Jerome Powell was emphatic about this at the Federal Open Market Committee news conference on Oct. 29. "We are absolutely committed to returning inflation to 2%," he said. "There should be no question that that is where we are going."

Economic data tell a different story. Headline inflation remains sticky near 3%, and forecasters expect that to persist. The Blue Chip consensus forecast expects personal consumption expenditure inflation—the Fed's preferred measure—to hover near 3% through 2026. It won't fall to 2.1% until 2030. The Philadelphia Fed's Survey of Professional Forecasters shows even more drift: Both the five-year and 10-year expected PCE inflation rates are edging higher, moving further away from the 2% anchor the Fed once took for granted.

These trends seem to suggest a softening of the Fed's inflation target. Fed officials, however, are quick to note that part of the recent uptick in prices reflects the higher tariffs imposed by President Donald Trump. These tariffs, they argue, represent a negative supply shock—a drag on the economy's productive capacity. In principle, such shocks shouldn't lead to persistently higher inflation but rather to a one-time adjustment in prices that temporarily pushes inflation above target. That's their hope, at least.

That hope isn't much to hang on. Most supply shocks are, by definition, transitory and cannot explain the persistence of sticky inflation like the kind the U.S. has seen since mid-2023. The notion that a negative supply shock will have only a temporary effect on prices assumes that inflation expectations will remain well anchored.

Fed officials often cite bond market forecasts of inflation as evidence that inflation expectations remain well anchored. But professional forecasters are beginning to mark up their inflation projections in this area, too.

Even more concerning, households appear to be responding as if the new tariffs will raise future inflation more persistently. Inflation from the Covid-19 pandemic left them scarred, more sensitive to price shocks, and less confident about the Fed's ability to anchor inflation. Supply shocks, if anything, may now be making inflation stickier than fleeting.

If supply shocks and inflation psychology explain the stickiness of prices, fiscal pressures explain why they may stay that way. The U.S. is entering a period where fiscal policy, not monetary resolve, increasingly determines the inflation path. With debt projected to climb well above 120% of gross domestic product under current law, and interest costs approaching $2 trillion by the early 2030s, the fiscal math is diminishing the Fed's room to maneuver.

In such an environment, a 3% inflation rate is less a policy failure than an adaptation—the byproduct of an economy adjusting to a chronic government deficit and the political impossibility of fiscal consolidation.

The early warning signs of fiscal dominance are already visible. Trump's open calls for rate cuts on the grounds that they would "save $800 billion per year" are the clearest expression yet of monetary policy being viewed through a fiscal lens. Similar pressures appear in recent proposals by Republican senators to end interest on reserves as a way to save taxpayers money; in discussions to loosen the supplementary leverage ratio so banks can absorb more Treasuries; and in growing political enthusiasm for stablecoins, precisely because they create new captive demand for government debt.

Even the Treasury's pivot toward heavier Treasury bill financing points to a world in which market structure, regulation, and innovation are quietly being marshaled to sustain an ever-larger debt load. These are the institutional tremors of a shift from monetary to fiscal dominance, small in isolation but revealing when considered cumulatively.

If this drift continues, the Fed may find that the last mile of disinflation isn't just difficult, but unreachable. Once the consolidated government budget constraint begins to bind, the arithmetic of debt service, not the resolve of central bankers, will dictate the equilibrium inflation rate. Higher inflation becomes a feature, not a bug. It is a necessary lubricant for an overleveraged fiscal state.

The Fed can talk tough, but as long as fiscal pressures dominate, its independence will remain conditional and its 2% goal aspirational. The last mile of disinflation may be the hardest, not because the Fed is weary, but because the road itself now bends toward fiscal dominance. B

This Corporate Benefit Flies Under the Radar

BY ELIZABETH O'BRIEN

Millions of Americans are going through the annual ritual of choosing corporate benefits for next year, during open enrollment season.

It's a good time to assess benefits like vision care or even pet insurance. Disability insurance is also on the menu at most employers, and it's a major benefit that too many people overlook.

A mental or physical disability is far more likely to hit workers and threaten their financial stability than a premature death. About 1 in 4 of today's 20-year-olds will become disabled before reaching their full retirement age of 67, according to Social Security Administration estimates. Moreover, the Trump administration has proposed changes to rules for qualifying for Social Security disability benefits, tightening criteria especially for older workers.

A Social Security press officer said the Trump administration is "promoting dignity in work and modernizing policies that protect the integrity of the disability insurance system," adding that the rule changes are still in early stages of development.

Companies can help bridge a potential gap in coverage, though many employees aren't even aware of the benefit. Just 56% of workers can say for sure whether their employer offers a disability insurance benefit, according to a 2024 study by Limra and Life Happens, a nonprofit that provides insurance education.

"There's a lot of talk about preparing for retirement but not a ton of conversation about preparing for disability," says Meghan Pistritto, vice president of product for Prudential Group Insurance.

How do you know how much to buy, or whether it's worth the cost? A general guideline is to replace 60% to 70% of your income with a combination of short- and long-term disability coverage. You want to make sure your benefits cover essentials like food, housing, healthcare, and child care. If you become unable to work due to an illness or injury—musculoskeletal issues like back pain and arthritis are among the most prevalent claims—you will most likely reduce spending on travel and other discretionary expenses, and won't have the expense of commuting.

One hitch is that workers can't replace 100% of their pre-disability income, even by stacking a workplace policy with an individual one bought outside of work. Insurers figure you won't have an incentive to return to work if they cover 100% of your income, and individual policy issuers generally require proof of income. If you qualify for Social Security disability, your private-plan benefits may be reduced by the amount you receive from the federal government. A handful of states have mandatory paid disability programs as well.

The more you earn, the more you may need to supplement your disability benefit with an outside policy. Say your workplace plan replaces 60% of your income, up to a maximum of $10,000 a month. Most policies pay out the lesser of those amounts. So, if you earn $120,000 a year, you can expect $72,000 in benefits if your claim lasts a full year. If you're earning, say, $400,000 a year, you'd want to replace at least 60%, or $240,000, if you become disabled.

Since you'd only receive $120,000 through your workplace policy, you could fill the gap by buying an individual policy, says Bryan Wood, a partner in the employee benefits division at C3 Risk & Insurance Services. Note that individual policies are medically underwritten, so applicants can be disqualified based on their health status.

Taxation is another consideration. If your employer offers disability insurance and pays the premium for the policy, the benefits will generally be taxable. If you pay the premium, benefits are tax-free. B

MAILBAG

Boeing: A Stock for The Long Haul

To the Editor:
Boeing stock is worth holding for the long haul ("Boeing's Road to Redemption—and a Higher Stock Price," Cover Story, Oct. 31). An investor who purchased $1,000 worth of Boeing stock at the initial public offering in 1962 and kept it to date would now possess an equity valued at $823,732. Under CEO Kelly Ortberg, we might very well watch Boeing, now a bargain, double in the next five to 10 years. The company has overcome the doldrums and has only one main competitor for a vast market. Air travel will continue to boom unless a global depression hits—which is possible but unlikely.
John Harvard Lomax

Not Worth His Salt

To the Editor:
Regarding "Tesla Stock and Musk's $1 Trillion Robo Ransom—What to Know," Streetwise, Oct. 31): No chief executive is worth that kind of money. The greatest investor in the world, Warren Buffett, relies on stock appreciation for his income. Why do CEOs like Elon Musk extract money from the company's earnings?
Frank Simo
On Barrons.com

Higher Loan Growth

To the Editor:
The key phrase in this article is "high credit quality loan portfolio" ("Bank of America Has a Game Plan to Catch Up to Its Peers. It's Time to Buy the Stock," Oct. 31). It's a base on which the two new co-presidents can build higher loan growth as its low-yielding securities portfolio burns off. Buy a stock for where it will be in 18 months, not where it is now.
William Lyon
On Barrons.com

A 60/20/20 Portfolio

To the Editor:
A 60/40 portfolio works best during disinflation ("60/40 Funds Are Staging a Comeback. Here Are 3 Solid Choices," Oct. 29). A weakening economy may hurt company profits and stock prices, but bond yields are likely to fall. This negative performance correlation generally worked from 1982 until just a few years ago. It's hard to argue for 60/40 now, with long-term inflation such a high risk. Perhaps Morgan Stanley's recent suggestion of 60/20/20 (gold) is better equipped to protect investors who are looking forward, not backward.
Richard Saler

Modern-Day Utilities

To the Editor:
How many times have the Magnificent Seven proved the pundits wrong over the past 10 years? ("Meta Faces a Sudden Reckoning. How Big Tech Earnings Are Reshaping the AI Race," Tech Trader, Oct. 31). The fourth industrial revolution is in progress, and the naysayers will be like the horse-and-carriage owners of 19th century. There will be no modern life without the Mag 7. They are modern-day utilities.

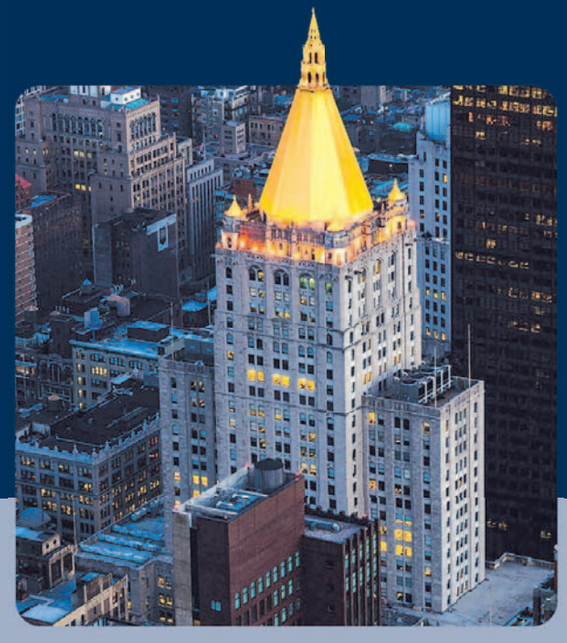
NEW YORK LIFE

#1 IN VARIABLE ANNUITIES WITH PRINCIPAL PROTECTION[1]

Confident investing begins when loss isn't an option.

In times of market uncertainty, investor hesitation can derail even the most thoughtful retirement planning conversations. That's where the no-loss guarantee[2] option in the New York Life Premier Variable Annuity–FP Series can make a real difference. It protects your client's initial investment, while offering tax-deferred growth potential across a diverse range of investment options. Combine that with a built-in death benefit[4] and unique fee structure that never charges for growth[3], and you're helping investors manage risk and move forward with confidence.



Optional no-loss guarantee[2]

Growth-friendly fee structure option[3]

Legacy protection built-in[4]

Annuities are easier with New York Life. Scan here for VA insights.

Please consider the charges, risks, expenses, and investment objectives carefully before purchasing a variable annuity. The product and fund prospectuses contain this and other information and can be obtained from a financial professional. Read the prospectuses carefully before you invest or send money.

[1] Provider of Principal-Protected Annuities - As of 12/31/24 and is based on premium amounts as reported by LIMRA. Variable Annuity Guaranteed Living Benefit Election Tracking Survey. "Principal protection" is provided by the Investment Preservation Rider–FP Series, an optional rider for an additional fee.

[2] Refers to the optional Investment Preservation Rider–FP Series (IPR), an accumulation benefit rider which contains principal protection that guarantees a percentage of the sum of all premium payments made in the first Policy Year, less all IPR Guaranteed Amount Proportional Reductions made during the rider holding period. Refer to the Rate Sheet Prospectus Supplement for the current IPR charge and Guaranteed Amount percentage for policies with an application signed on or after May 1, 2024. The IPR does not protect the owner's investment from day-to-day market fluctuations or against losses that could be realized prior to completion of the holding period. The IPR is subject to certain allocations restrictions so not all investment options offered under the VA may be available for allocation. With the IPR, the maximum target allocation to equity is 70%, so investors may not experience the full risk or return potential of the market. **Any guarantees of the annuity are based on the claims-paying ability of the issuer.**

[3] In an up market, the level fee structure may work to the client's advantage, as more money stays in the account and potentially continues to grow. However, it should be noted that in a flat or down market, a traditional Mortality & Expense (M&E) fee structure may be more advantageous.

[4] The Standard Death Benefit is automatically included with the policy at no additional cost, and unless the policy is annuitized, the beneficiary will receive the greater of the account value at the time of death or the total premiums paid, adjusted for withdrawals. Additionally, if the owner holds the policy through the initial 7-year surrender-charge period, they will qualify for a one-time death benefit step-up at no extra charge. For an even greater financial legacy, investors can purchase an Annual Death Benefit Reset Rider (ADBR) up to age 75 at an annual cost of 0.25% of the reset value. This rider locks in any growth on each policy anniversary up to age 85. ADBR available only at the time of application, in jurisdictions and products where approved. Growth is locked in each year up to age 85 and the death benefit is adjusted for any proportional withdrawals.

Variable annuities are long-term financial products used for retirement purposes. Variable annuities contain certain fees and charges and there are risks, restrictions, and limitations to consider. Variable annuities are subject to market risk including possible loss of principal. Withdrawals or surrenders may be subject to ordinary income taxes and, if made prior to age 59½, may be subject to a 10% IRS penalty.

This material is general in nature and is being provided for informational purposes only. It was not prepared, and is not intended, to address the needs, circumstances and/or objectives of any specific individual or group of individuals.

New York Life and its affiliates are not making a recommendation to purchase any specific products. For advice regarding your personal circumstances, you should consult with your own independent financial and tax advisors.
